Tube type	Additives and the mechanism of action	Inversions at blood draw	Important application note
Blood culture bottle/tube 	<ul style="list-style-type: none"> May contain a growth medium to enhance microbial growth and sodium polyanethole sulfonate to prevent bacteria killing by inhibiting the activation of complement function. 	8 to 10	<ul style="list-style-type: none"> Used for bacteria or fungi detection in a patient's blood. Extreme care should be taken to minimize contamination from the environment. Typically two sets of blood cultures are collected for adult patients, with one for aerobic (drawn first) and one for anaerobic.
Coagulation tube 	<ul style="list-style-type: none"> Contain sodium citrate, which inhibits coagulation through chelating free calcium ions (Factor V). Sodium citrate binds calcium with fixed stoichiometry, and adding more calcium can reverse its anticoagulation effect. 	3 to 4	<ul style="list-style-type: none"> Primarily used for coagulation studies. Tubes must be completely filled to ensure proper blood-to-anticoagulant ratio. Several AD biomarkers, such as Aβ peptides, NFL, GFAP and t-tau, are lower in citrate plasma compared to other plasma samples.
Serum tube 	<ul style="list-style-type: none"> Contain glass or silica particles to activate clotting through Factor XIII. May contain gel separator (gold/tiger top) to prevent contamination of cellular components by adding a diffusion barrier between serum and coagulated blood. 	Glass: 0 Plastic: 5	<ul style="list-style-type: none"> Widely used in the hospital system for testings on clinical chemistry, immunology, and serology. Aβ peptides, t-tau and several pTau species are present in lower level in serum compared to plasma. Similar diagnostic accuracy for pTau181, pTau231 and t-tau in serum and plasma.
Heparin tube 	<ul style="list-style-type: none"> Contain sodium or lithium heparin which inhibit coagulation by inactivating thrombin and factor Xa. 	8 to 10	<ul style="list-style-type: none"> Widely used in clinical biochemical examination. Some evidence suggest higher AD biomarker levels in heparin plasma compared to other specimens.
EDTA tube 	<ul style="list-style-type: none"> Spray-coated with EDTA, which inhibits coagulation through chelating calcium ions. The chelating of calcium by EDTA is irreversible. 	8 to 10	<ul style="list-style-type: none"> More stable due to inhibition of some enzymatic activities. Preferred specimen for hematology testing. High EDTA concentrations are hypertonic and may shrink the red blood cells. Most used specimens in blood AD biomarker research.
Glycolytic inhibitor tube 	<ul style="list-style-type: none"> Contain sodium fluoride to inhibit glycolysis. Citrate, oxalate and EDTA may be added to inhibit coagulation and other metabolic processes. 	8 to 10	<ul style="list-style-type: none"> Used for determining glucose and lactate levels.

Tietz Clinical Guide to Laboratory Tests - E-Book Alan H. B. Wu, 2006-06-08 This new edition of Norbert Tietz's classic handbook presents information on common tests as well as rare and highly specialized tests and procedures including a summary of the utility and merit of each test. Biological variables that may affect test results are discussed and a focus is placed on reference ranges, diagnostic information, clinical interpretation of laboratory data, interferences and specimen types. New and updated content has been added in all areas with over 100 new tests added. Tests are divided into 8 main sections and arranged alphabetically. Each test includes necessary information such as test name or disorder and method, specimens and special requirements, reference ranges, chemical interferences and in vivo effects, kinetic values, diagnostic information, factors influencing drug disposition and clinical comments and remarks. The most current and relevant tests are included, outdated tests have been eliminated. Test index with extensive cross references and disease index provide the reader with an easy way to find necessary information. Four new sections in key areas: Preanalytical, Flow Cytometry, Pharmacogenomics and Allergy make this edition current and useful. New editor Alan Wu, who specializes in Clinical Chemistry and Toxicology, brings a wealth of experience and expertise to this edition. The Molecular Diagnostics section has been greatly expanded due to the increased prevalence of new molecular techniques being used in laboratories. References are now found after each test rather than at the end of each section for easier access.

Hemostasis and Thrombosis Emmanuel J. Favaloro, Robert C. Gosselin, 2023-05-19 This second edition volume expands on the previous edition with updates about the latest state of the art techniques used in leading hemostasis and thrombosis laboratories for diagnosis and exclusion of hemorrhagic and thrombotic diseases. The chapters in this book are organized into seven parts. Part One provides a general overview on hemostasis and thrombosis preanalytical issues in testing and routine hemostasis assays. Part Two covers laboratory testing for thrombophilia, including reviews for activated protein C resistance, protein C lupus anticoagulant testing and antiphospholipid antibodies. Part Three addresses monitoring continuous anticoagulant infusions and measuring the effects of oral anti-thrombotic therapy. Part Four talks about heparin induced thrombocytopenia and vaccine induced immune thrombotic thrombocytopenia. Part Five and Six cover ADAMTS13 activity testing and new information on bleeding disorders such as chromogenic factor VIII assays, measurement of emicizumab and treatment of hemophilia A and B. Finally, Part Seven discusses global assays, research applications and postanalytical considerations. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls. Cutting edge and comprehensive, *Hemostasis and Thrombosis Methods and Protocols* Second Edition is a valuable resource for scientists and researchers struggling to identify the appropriate methods for hemostasis and thrombosis testing or who seek additional expert guidance on such testing.
