Aristotle's 'Parva naturalia' Ronald Polansky, 2024-05-20 Aristotle's *Parva naturalia* continues the investigation begun in the *De anima*. The *De anima* defines the soul and treats its main powers: nutrition, sense, perception, intellect, and locomotion. The *Parva naturalia* consists of six treatises: On sense and sensible objects, On memory and recollection, On sleep, On dreams, On divination in sleep, On motion of animals, and *De motu animalium*. *De motu animalium* discusses length and shortness of life, and On youth and old age, and respiration attends more to bodily involvement with soul. While each work offers fascinating and challenging insights, there has never been as extensive a commentary covering them together. A reason is that the works have often been viewed as incidental and even inconsistent. The *De motu animalium* has not typically been included when viewed as an isolated work on animal locomotion. This commentary argues that the treatises considered together and with the *De motu* among them display a tight sequence manifesting an artful yet easily overlooked design. We reveal many techniques of Aristotle's writing that have received little consideration previously. Our commentary contributes to a unified and comprehensive account of Aristotle's overall project regarding the soul and its connections with the body.

Matter Transmission Nicolás Salazar Sutil, 2018-05-17 Arguing for a paleocybernetic approach to current media studies debates. Nicolas Salazar Sutil develops an original framework for a new media ecology that embraces the primitive, the prehistoric, and the brute. Paying serious attention to materials used for cultural mediation that are unprocessed, unexplained, and raw such as bones and limestones. Salazar Sutil posits that advanced industrialisation of new media technology has prompted countercultural movements that call for radical new ways of transmitting culture for instance through an experiential and high-tech appreciation of prehistoric landscape heritage. The future calls for a Palaeolithic awareness of living landscape as medium for the embodied transmission of cultural imaginaries and memories. The more media technology spurs mass forms of instantaneous media communication, the greater the need for primitive knowledge of earthling body and earthly landscape our prime media for sustainable cultural transmission.

Understanding Imagination Dennis L. Sepper, 2013-05-13 This book discusses that imagination is as important to thinking and reasoning as it is to making and acting. By reexamining our philosophical and psychological heritage, it traces a framework, a conceptual topology, that underlies the most disparate theories. A framework that presents imagination as founded in the placement of appearances. It shows how this framework was progressively developed by thinkers like Plato, Aristotle, Descartes, and Kant, and how it is reflected in more recent developments in theorists as different as Peirce, Saussure, Wittgenstein, Benjamin, and Bachelard. The conceptual topology of imagination incorporates logic, mathematics, and science, as well as production, play, and art. Recognizing this topology can move us past the confusions to a unifying view of imagination for the future.

Twentieth-century Color Photographs Sylvie Pénichon, 2013 This book will interest instructors and students in classroom settings, conservators, registrars, curators, archivists, and collection caretakers, and anyone else

concerned with the long term preservation of color photographs. With the advent of digital imaging the era of traditional color photography is coming to an end. Yet more than 150 years after the invention of color photography museums, archives and personal collections are full of images to be cherished, studied and preserved. These photographs often made with processes and materials no longer used or easily identified, constitute an important part of the cultural and artistic heritage of the twentieth century. Today it is more important than ever to capture the technical understanding of the processes that created these irreplaceable images. In providing an accessible overview of the history and technology of the major traditional color photographic processes this abundantly illustrated volume promises to become the standard reference in its field. Following an introductory chapter on color photography in the nineteenth century seven uniformly structured chapters discuss the most commercially or historically significant processes of the twentieth century: additive color, screen, pigment, dye, imbibition, dye coupling, dye destruction, dye diffusion and dye mordanting, and silver toning, offering readers a user friendly guide to materials, methods of identification and common kinds of deterioration. A final chapter presents specific guidelines for collection management, storage and preservation. There is also a glossary of technical terms along with appendixes presenting detailed chronologies for Kodachrome and Ektachrome transparencies, Cibachrome, Ilfochrome, printing materials and Instant films.
