INJECTION PUMP

DESCRIPTION

General

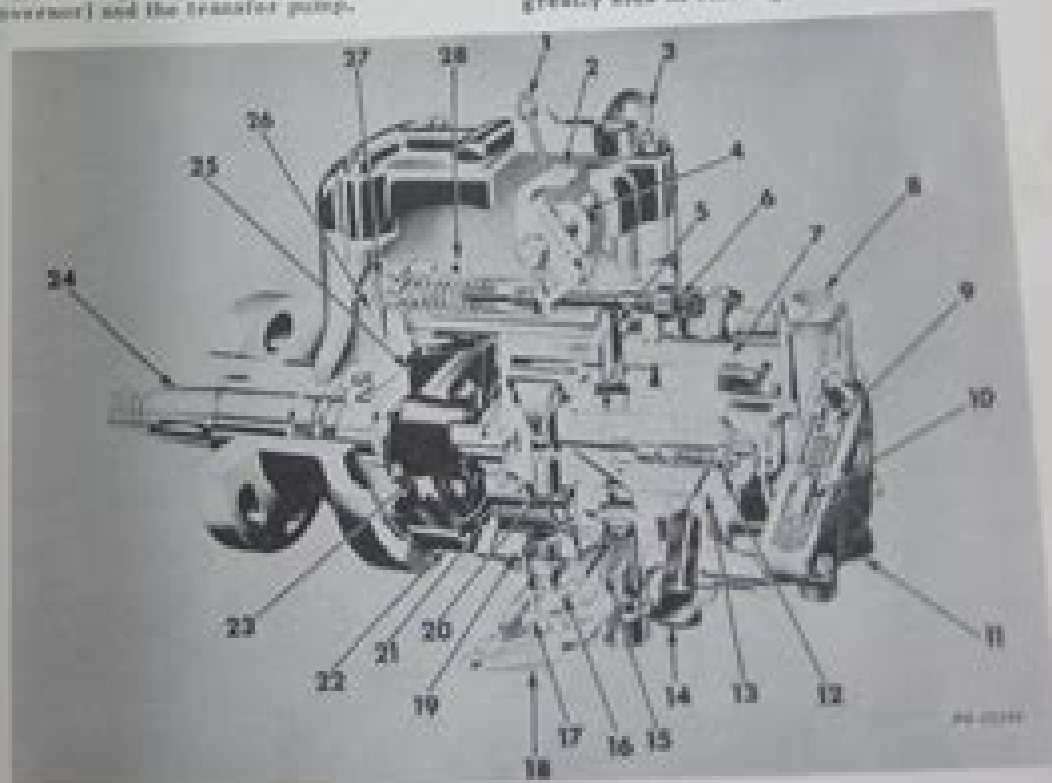

The Bosch fuel injection pump is a single cylinder, opposed plunger, inlet metering, distributor type pump.

The main components are: Drive shaft, distributor rotor, transfer pump, pumping plunger, internal cam ring, hydraulic head, and valve, governor and load advance mechanism.

The rotating members revolve on a common axis and are: The drive shaft, distributor rotor (containing the plungers and mounting the governor) and the transfer pump.

The driving member is the drive shaft (24, in Illustr. 1) that engages the distributor rotor (13) by means of a tang-in-slot that revolves the rotor in the hydraulic head (7). The drive and rotor in the hydraulic head containing at the rotor has a diametric bore containing two plungers (opposed) (25). The opposite end of the rotor serves as the transfer pump rotor.

The load advance mechanism (18) provides for fuel injection at the most desirable time for various engine loads. In addition, it allows the engine to be started with injection retarded (from full advance position). This feature greatly aids in starting.
