

"Cracking the Code of Life: The race to decode human DNA" Video Questions  
 (A video on the Human Genome Project)  
 NOVA – © 2001

"When you look at the mirror, you don't see DNA or RNA. You see proteins and the action of proteins. We are the product of our proteins and their activity." Craig Venter, "Cracking the Code of Life" Video

- 1) How much of a banana's DNA is similar to ours? 50% OF THE GENES
- 2) 4 and some billion years ago – 1<sup>st</sup> speck of life on warm surface of a BUBBLE
- 3) Raw DNA looks like what in raw form? Eric Lander – geneticist found that it looks like LONG STRANDS OF MOLECULES; these double helices of DNA ARE LIKE LITTLE THREADS OF COTTON WHEN PUT ALL TOGETHER.
- 4) Human beings only have TWICE as many genes as the fruit fly.
- 5) DNA is organized similar to steps in a ladder
- 6) Each step is made of base pairs: cytosine-guanine and adenine-thymine.
- 7) DNA is 3 billion steps long in form of a double helix.
- 8) Size of DNA – 10 angstroms = 1 billionth of a meter.
- 9) Each step in the ladder can give information about what will be passed to your children.
- 10) Every human baby born is 99.9 % identical to every other human baby in the world.
- 11) Since 1990, scientists have been involved in the Human Genome Project to understand the tiniest differences in our genes that makes us healthy or sick.
- 12) Only about 1% of the GENES are active and this is why scientists needed a map to find these genes.
- 13) Revolutionized technology – 10,000 letters every second.
- 14) Boeing 777 – about 100,000 parts.
- 15) Genome project, is similar to getting a parts list, but that's all you have. It's important to have, but that doesn't mean you know how to put it together.
- 16) Allison and Tim had a son Hayden – something was not right – something clearly wrong by time he was 1 year old. Laughed all the time. Never crawled or ate with his hands. Started regressing. Started missing developmental milestones. Slowly getting worse – Tay Sachs Disease.
- 17) Tay Sachs begins with just 1 error in a letter/base of the DNA molecule.
- 18) Genes create proteins, and the protein that is supposed to dissolve fat in brain, which when it is not produced, the fat builds up in the brain and begins to destroy the baby's brain.
- 19) Hayden has gone blind, can't eat solid food, has seizures as much as 10 times a day. Only one outcome. Most die by age 5-7 years.
- 20) Tim's identical twin brother, Charlie, and wife Blythe, who have 2 girls, including little Cameron, who startled easily just like Hayden always did. Cameron had Tay Sachs also.
- 21) Tay Sachs is a very rare condition and it usually occurs in specific groups, like Ashkenazi Jews. And even then, the baby must inherit the bad gene from both parents.
- 22) Hayden Lord died a few months before his 3rd birthday.
- 23) The promise of the human genome project – an early warning system for parents, doctors, etc. about genetic diseases. Geneticists can spot these catastrophes while they're still insignificant dots on the gene.
- 24) Craig Venter, a government scientist thought that he could find the human genome much faster than the other science team in 1990.
- 25) Craig Venter wanted to use the new machine that could identify Cs and Ts and As and Gs.
- 26) This machine worked as a robot chopped human genes into tiny pieces. A laser bounces light off of each tiny bit of DNA and the color that it sees represents individual letters in the genetic code
