Weighing 1.4kg as the lightest rugged tablet on the market, the Getac E100 is easy to manoeuvre, and built with field and customer service applications in mind. Despite its trim look and feel, the E100 is every bit as tough as the heavyweights: it meets MIL-STD-810G and IP65 standards for durability and protection against dirt/dust, water, motion/vibration, temperature and other factors that would severely damage a commercial-grade PC.

The E100 offers an 8.4" TFT SVGA transmissive display with an integrated touchscreen panel. Optional features include an ultra-bright sunlight-readable display, an 800 nits backlit LCD screen for astonishing readability. The special hot-swappable battery design extends the working hours of the unit as well as enables the better mobility for the professionals in the field.

The E100 includes 2GB DDR3L DRAM and a vibration-resistant SSD, all contained in a watertight fully rugged magnesium alloy case that is shock and drop resistant.

Embedded with Gobi™ mobile broadband module, E100 supports worldwide 3G standards which offer flexible carrier choices and ensure data security during transmission. In addition, the 802.11 a/b/g/n WLAN and Bluetooth 2.1 connectivity is included as standard features.

## **Carrier Tech 2000 Manual:**

The SAGES Manual of Perioperative Care in Minimally Invasive Surgery Richard L. Whelan, James W. Fleshman, Dennis L. Fowler, 2006-01-16 The second SAGES Society of American Gastrointestinal Endoscopic Surgeons manual was intended to be a companion piece for the successful first SAGES manual edited by Carol Scott Connor that was published more than 4 years ago. Originally the goal was to concentrate on topics that were not fully covered or often ignored aspects of the preoperative preparation of the patient and the operating room as well as the postoperative care of patients undergoing minimally invasive operations. It was also our intention to include a section for each procedure where several different port placement schemes would be presented and briefly discussed. Unique to this manual is the impact of the patient's body habitus on port placement, short or long, narrow or wide. The impact of port placement is also taken into account for many of the procedures. Also unique are chapters devoted to hypothermia, port wound closure and the management of subcutaneous emphysema and abdominal wall hemorrhage caused by trocars. Naturally, the surgeon tends to focus on the technical aspects of the procedure such as the operative tasks to be carried out, the order of operation and the position of the surgeon and assistant. However, it is critical that the surgeon be aware that the CO<sub>2</sub> pneumoperitoneum can cause significant physiologic alterations that, if not compensated for by the anesthesiologist and surgeon, may endanger the patient or prevent the laparoscopic completion of the procedure.
