Cell Jack Challoner:

The Cell Jack Challoner, Dr Philip Dash, 2015-10-30 The microscopic cell is Earth's greatest success story and the common ancestor we share with all other organisms. Formed over three and a half billion years ago, life exploded from this minuscule powerhouse first throughout the seas and then over millions of years across the lands to create the complex living forms populating the planet today. Yet how has such a minute organism been so powerful? What has enabled it both to create and break down life on earth over billions of years? And how have cells interacted to create an extraordinary diversity of plant, aquatic, terrestrial and avian life? Here Jack Challoner shines a spotlight on the passage of the cell through time to explore how a continual myriad of interactions and symbiotic relationships have been and continue to be the extraordinary catalyst for life.

The Cell Jack Challoner, 2015 The cell is the basic building block of life. In its 3.5 billion years on the planet, it has proven to be a powerhouse spreading life first throughout the seas, then across land, developing the rich and complex diversity of life that populates the planet today. The Digital Revolution Jack Challoner, 2002 Big ideas made simple: six books in an incredible new series that explains important scientific ideas more clearly than ever before. Climate change resulting from an increase in greenhouse gases is perhaps the greatest threat to our planet's future. Here Fred Pearce examines the causes and dramatic effects and what can be done to remedy the situation before it's too late. This stimulating new series uses an innovative mix of graphics, artwork and photographs to explain and illuminate the most important scientific topics of the day. Unique in popular science guides, Essential Science uses bright full color images to make traditionally difficult subjects more accessible. Each title focuses on a scientific or technological topic that is currently provoking debate and is likely to have a widespread impact on our lives. Lively readable text from top science writers ensures all readers from 14 schoolchildren to academics gain a full understanding of the facts and related issues. Under the direction of renowned science writer John Gribbin, expert authors describe in lively jargon-free text the principles and discoveries behind each subject, summarize what is currently known and predict future issues and trends.

Les cellules, une histoire de la vie Christian Sardet, 2025-10-02T00:00:00-04:00 Comprendre l'origine et le fonctionnement des cellules c'est découvrir l'unité de la vie sur Terre. Un voyage fascinant dans le temps et l'infiniment petit. Tout ce qui vit sur Terre, des bactéries aux arbres et aux humains, est constitué de cellules ayant toutes pour origine une même cellule ancestrale commune: LUCA, Last Universal Common Ancestor. Comprendre comment cette première cellule est apparue, il y a des milliards d'années, puis a évolué pour former tous les organismes anciens et actuels, est une plongée au cœur même du vivant. Passionné de cellules, d'embryons et de plancton, auquel il a consacré sa vie de chercheur et d'artiste, Christian Sardet de la façon la plus simple et la plus imagée possible nous raconte comment fonctionnent et communiquent les cellules et ce que nous en savons aujourd'hui.

smallest most fundamental constituents of matter and how that quest helps us to understand what everything is made of and how it all works Challoner covers a wide range of topics including the development of scientific thinking about atoms and the basic structure of atoms how atomic interactions account for the familiar properties of everyday materials the power of the atomic nucleus and what the mysterious quantum realm of subatomic particles can tell us about the very nature of reality Illustrated in color throughout The Atom offers clear answers to questions we have all pondered as well as some we have never even dreamed of It describes the amazing discoveries scientists have made about the fundamental building blocks of matter from quarks to nuclear fission to the God particle and explains them accessibly and concisely The Atom is the engaging and straightforward introduction to the topic that we didn't get in school *ENC Focus*, 1994
