

Chapter 4- A tour of the cell

- Cells organisms's basic unit of structure and function

Concept 4.1: Biologists use microscopes and tools of biochemistry to study cells

Microscopy

- **Light microscope (LM):** visible light passed through specimen and then through glass lenses
 - Lenses refract light so that specimen is magnified
 - Studies living cells
- **Magnification:** ratio of object's image size to real size
- **Resolution:** measure of clarity of image
- **Contrast:** difference in brightness between light and dark areas of image
- **Organelles:** membrane-enclosed structures within eukaryotic cells
- **Electron microscope (EM):** focuses beams of electrons through specimen or onto surface
 - Revealed many subcellular structures but methods used to prepare specimen kills cells
- **Scanning electron microscope (SEM):** detailed study of topography of specimen; scans surface of sample coated in thin film of gold, translate pattern of electrons into electronic signal sent into video screen
- **Transmission electron microscope (TEM):** internal structure of cells; aims electron beam through very thin section of specimen

Cell Fractionation

- **Cell fractionation:** technique for studying cell structure and function
 - Broken up cells placed in tube, spun in centrifuge, largest cell components settle at bottom forming a pellet
 - Liquid above pellet poured into new tube and centrifuged at a higher speed for longer, resulting in pellets with nuclei, mitochondria, (and chloroplasts if cells are from photosynthetic organisms), pieces of membrane, and ribosomes
 - Prepare specific cell components in bulk and identify functions

Concept 4.2: Eukaryotic cells have internal membranes that compartmentalize their functions

- Cells are prokaryotic and eukaryotic
- Bacteria and Archaea are prokaryotic

Readers' Guide to Periodical Literature ,1919 **Readers' Guide to Periodical Literature** Anna Lorraine Guthrie,Bertha Tannehill,Neltje Marie Tannehill Shimer,1910 Critical Care Study Guide Gerard J. Criner,Gilbert E. D'Alonzo,2013-03-09 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical acumen are commonly found Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions Because this knowledge base crosses many different disciplines introduction to caring for the intensive care patient while exciting may also be intimidating This textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to the patient both logical and successful The book contains three components 1 description of the procedural tasks commonly performed for the critically ill patient 2 explanation of the most common pathophysiologic states encountered and 3 description of specific disease entities with details of their differential diagnosis diagnostic strategy and therapeutic plan This book also uses several educational approaches that we have found useful in our own teaching sessions and prior textbooks Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy As an additional study aid margin notes highlight important teaching points and facilitate easy review of chapter content To consolidate the principles outlined in each chapter review questions with full text explanations are provided at the end of each chapter All these elements help reinforce the most important messages for the reader

Parapsychology Etzel Cardeña,John Palmer,David Marcusson-Clavertz,2015-07-25 Many people have experienced such unusual phenomena as dreams that later seem to correspond with unforeseeable events thinking of a long lost friend just before he or she unexpectedly calls or the ability to feel the presence of deceased loved ones What many do not realize is that these types of experiences have been researched for more than a century by eminent scientists including Nobel laureates Most of these researchers have concluded that some of these phenomena do occur although we are far from explaining them to everyone's satisfaction This book is the first in almost 40 years to provide a comprehensive scientific overview of research in the field of parapsychology explaining what we know and don't know about so called psi phenomena such as telepathy precognition or psychokinesis Contributors evaluate the evidence for these phenomena accounting for factors such as selective memory wish fulfillment and incorrect methods or analyses in some cases offering psychological physical and biological theories Instructors considering this book for use in a course may request an examination copy here **Current**
