Bioinformatics provides an introduction as well as a detailed description of the application of various techniques used in chemo and bioinformatics. It covers basic topics such as a discussion of computational techniques used in the predictions of structures, properties and dynamics of small compounds, macromolecules and their complexes. Diverse applications of QSAR methods are also revealed. Various chapters offer specifics of current methodologies used by research labs in the pharmaceutical industry for drug design. Modern computational approaches taking advantage of searching big data using artificial intelligence and machine learning are discussed while the necessity of applying such advanced novel techniques for bio and chemo informatics is revealed. This handbook combines nicely together discussion and assessment of both closely related fields of modern informatics. It is a welcome addition to the university libraries, research institutes as well as to basic textbook resources of individual researchers. The target audience includes students both graduate and advanced undergraduate university researchers, scientists working in private and governmental laboratories as well as a large group of developers from pharmaceutical and medical institutes and related industrial research centers.

OOIS'98 Colette Rolland, Georges Grosz, 2012-12-06

The Sorbonne University is very proud to host this year the oms Conference on Object Oriented Information Systems. There is a growing awareness of the importance of object oriented techniques, methods and tools to support information systems engineering. The term information systems implies that the computer based systems are designed to provide adequate and timely information to human users in organizations. The term engineering implies the application of a rigorous set of problem solving approaches analogous to those found in traditional engineering disciplines. The intent of this conference is to present a selected number of those approaches which favor an object oriented view of systems engineering. oms 98 is the fifth edition of a series of conferences. Starting in 1994 in London this series evolved from a British audience to a truly European one. The goal is to build a world wide acknowledged forum dedicated to object oriented information systems engineering. This conference is organized with the aim to bring together researchers and practitioners in Information Systems, Databases and Software Engineering who have interests in object oriented information systems. The objective is to advance understanding about how the object technology can empower information systems in organizations on techniques for designing effective and efficient information systems and methods and development tools for information systems engineering. The conference aims also at discussing the lessons learned from large scale projects using objects. The call for oms was given to an international audience.
