Computerized Vehicle Routing And Scheduling In Road Transport:

Computerised Vehicle Routing and Scheduling in Road Transport Peter Eibl,1996 Over the past 20 years academics industry commentators and practitioners in the field of physical distribution have been preoccupied with the computational and technical side of computerized vehicle routing and scheduling Comparatively little research has been carried out on the user or management aspects of the technology This study investigates the adoption of CVRS technology Moreover the study evaluates the success of the software used in both a strategic tactical and in an operational role The findings highlight that CVRS technology is used by only a relatively small number of organizations despite being an effective means to improve the efficiency of transport operations and to provide substantial intangible benefits Efficient Road Transport Scheduling John Edward Sussams,1971 Decision Support Systems: Experiences and Expectations T. Jelassi,M.R. Klein,W.M. Mayon-White,2014-06-28 This proceedings volume aims to consolidate current knowledge of research into the many fields of DSS and to identify key issues which should be incorporated into the future research agenda The main themes of this volume include DSS for distributed decision processes Embedding knowledge in DSS and DSS and organizational change Green Logistics Alan McKinnon,Michael Browne,Anthony Whiteing,2012-12-03 As concern for the environment rises companies must take more account of the external costs of logistics associated mainly with climate change air pollution noise vibration and accidents Green Logistics analyzes the environmental consequences of logistics and how to deal with them Written by a leading team of logistics academics the book examines ways of reducing these externalities and achieving a more sustainable balance between economic environmental and social objectives It examines key areas in this important subject including carbon auditing of supply chains transferring freight to greener transport modes reducing the environmental impact of warehousing improving fuel efficiency in freight transport reverse logistics for the management of waste The new edition is completely updated throughout with new methodologies and case studies to illustrate the impact of green logistics in practice *Rural Public and Intercity Bus Transportation* ,1993 **Handbook on Decision Making** Chee Peng Lim,2010-09-07 Decision making arises when we wish to select the best possible course of action from a set of alternatives With advancements of the digital technologies it is easy and almost instantaneous to gather a large volume of information and or data pertaining to a problem that we want to solve For instance the world wi web is perhaps the primary source of information and or data that we often turn to when we face a decision making problem However the information and or data that we obtain from the real world often are complex and comprise various kinds of noise Besides real world information and or data often are incomplete and ambiguous owing to uncertainties of the environments All these make decision making a challenging task To cope with the challenges of decision making searchers have designed and developed a variety of decision support systems to provide assistance in human decision making processes The main aim of this book is to provide a small collection of techniques stemmed from artificial intelligence as well as other complementary methodo gies

that are useful for the design and development of intelligent decision support systems Application examples of how these intelligent decision support systems can be utilized to help tackle a variety of real world problems in different mains e g business management manufacturing transportation and food ind tries and biomedicine are also presented A total of twenty chapters which can be broadly divided into two parts i e **Decarbonizing Logistics** Alan McKinnon, 2018-06-03 Logistics accounts for around 9 10% of global CO2 emissions and will be one of the hardest economic sectors to decarbonize This is partly because the demand for freight transport is expected to rise sharply over the next few decades but also because it relies very heavily on fossil fuel Decarbonizing Logistics outlines the nature and extent of the challenge we face in trying to achieve deep reductions in greenhouse gas emissions from logistical activities It makes a detailed assessment of the available options including restructuring supply chains shifting freight to lower carbon transport modes and transforming energy use in the logistics sector The options are examined from technological and managerial standpoints for all the main freight transport modes Based on an up to date review of almost 600 publications and containing new analytical frameworks and research results Decarbonizing Logistics is the first to provide a global multi disciplinary perspective on the subject It is written by one of the foremost specialists in the field who has spent many years researching the links between logistics and climate change and been an adviser to governments international organizations and companies on the topic

International Encyclopedia of Transportation ,2021-05-13 In an increasingly globalised world despite reductions in costs and time transportation has become even more important as a facilitator of economic and human interaction this is reflected in technical advances in transportation systems increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts This has become particularly acute with the impact that Covid 19 has had on transportation across the world at local national and international levels Encyclopedia of Transportation Seven Volume Set containing almost 600 articles brings a cross cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering operations research economics geography and sociology in order to understand the changes taking place Emphasising the interaction between these different aspects of research it offers new solutions to modern day problems related to transportation Each of its nine sections is based around familiar themes but brings together the views of experts from different disciplinary perspectives Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines different parts of the world and different social perspectives The nine sections are structured around the following themes Transport Modes Freight Transport and Logistics Transport Safety and Security Transport Economics Traffic Management Transport Modelling and Data Management Transport Policy and Planning Transport Psychology Sustainability and Health Issues in Transportation Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future oriented view of new research areas or challenges The end result is a reference work that offers researchers and

practitioners new approaches new ways of thinking and novel solutions to problems All encompassing and expertly authored this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world Provides a forward looking and integrated approach to transportation Updated with future technological impacts such as self driving vehicles cyber physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach including sets of comparative studies and applications
