Conceptual Structures Timothy E. Nagle, 1992 *Conceptual Structures* John F. Sowa, 1984 This book combines the AI and cognitive sciences approaches In combining insights from each of the separate fields the book gives a unified view of knowledge representation Preface

Graph Structures for Knowledge Representation and Reasoning Madalina Croitoru, Pierre Marquis, Sebastian Rudolph, Gem Stapleton, 2018-03-29 This book constitutes the thoroughly refereed post conference proceedings of the 5th International Workshop on Graph Structures for Knowledge Representation and Reasoning GKR 2017 held in Melbourne VIC Australia in August 2017 associated with IJCAI 2017 the 26th International Joint Conference on Artificial Intelligence The 7 revised full papers presented were reviewed and selected from 9 submissions The contributions address various issues for knowledge representation and reasoning and the common graph theoretic background allows to bridge the gap between the different communities

Conceptual Structures, 2002 **Knowledge Representation and the Semantics of Natural Language** Hermann Helbig, 2005-12-19 Natural Language is not only the most important means of communication between human beings it is also used over historical periods for the preservation of cultural achievements and their transmission from one generation to the other During the last few decades the flood of digitalized information has been growing tremendously This tendency will continue with the globalization of information societies and with the growing importance of national and international computer networks This is one reason why the theoretical understanding and the automated treatment of communication processes based on natural language have such a decisive social and economic impact In this context the semantic representation of knowledge originally formulated in natural language plays a central part because it connects all components of natural language processing systems be they the automatic understanding of natural language analysis the rational reasoning over knowledge bases or the generation of natural language expressions from formal representations This book presents a method for the semantic representation of natural language expressions texts sentences phrases etc which can be used as a universal knowledge representation paradigm in the human sciences like linguistics cognitive psychology or philosophy of language as well as in computational linguistics and in artificial intelligence It is also an attempt to close the gap between these disciplines which to a large extent are still working separately

Proceedings of the Fifth Annual Workshop on Conceptual Structures, 1990 AI 2007: Advances in Artificial Intelligence Mehmet A. Orgun, John Thornton, 2007-11-23 This book constitutes the refereed proceedings of the 20th Australian Joint Conference on Artificial Intelligence AI 2007 held in Gold Coast Australia in December 2007 The 58 revised full papers and 40 revised short papers presented together with the extended abstracts of three invited speeches were carefully reviewed and selected from 194 submissions The papers are organized in topical sections on a broad range of subjects

Medinfo Marius

Fieschi, Enrico Coiera, Yu-Chan Jack Li, 2004 A fundamental challenge for medical informatics is to develop and apply better ways of understanding how information technologies and methods can help support the best care for every patient every day given available medical knowledge and resources In order to provide the most effective healthcare possible the activities of teams of health professionals have to be coordinated through well designed processes centered on the needs of patients For information systems to be accepted and used in such an environment they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient Developing innovative approaches to design and build evidence based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources Parallel challenges arise in the organization of research at the biological and clinical levels where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities
