

Molecular models

Reference: Chapter 10, Section 10.1, pages 464–473, and Section 20.3, pages 514–521

Aim

To explore both real and virtual molecular models of organic molecules.

Introduction

In organic chemistry we commonly represent structural formulas in two dimensions on paper for convenience. For example:

But in order to understand several aspects of organic structure and reactions, we need to consider the three-dimensional shape. This can be visualized by building real molecular models, and also virtually using molecular software programs. In this experiment you will have the chance to explore some of these ways of representing the three-dimensional shapes of organic molecules.

Pre-lab questions

- 1 Consider the ways in which two-dimensional structural formulas of the type shown on page 468 can provide misleading or incomplete information about the geometry of molecules.

The angle not always the same as in the given structural formulas. It does not give the real proportion of the lengths of the bonds and sizes of the atoms.

Method

Molecular models can be built using toothpicks to represent bonds and spherical materials to represent atoms, such as Plasticine or polystyrene balls. Several scientific kits are also available commercially. (The models photographed in Chapter 10, for example on pages 476 and 477, are built using Molymod kits.)

There are many software programs available to build and explore molecular models. Some free ones include:

- [Chemsketch](#) (not for Mac users)
- [Avogadro](#)
- [Phet Colorado](#)
