**Conduction of Heat in Solids** Horatio Scott Carslaw, John Conrad Jaeger, 1950      **Conduction of heat in solids** Horatio S. Carslaw, 1984      **Shock Wave Science and Technology Reference Library, Vol. 5** Blaine Asay, 2009-12-16

Los Alamos National Laboratory is an incredible place. It was conceived and born amidst the most desperate of circumstances. It attracted some of the most brilliant minds, the most innovative entrepreneurs and the most active tinkerers of that generation. Out of that milieu emerged physics and engineering that beforehand was either unimaginable or thought to be fantasy. One of the fields essentially invented during those years was the science of precision high explosives. Before 1942 explosives were used in munitions and commercial pursuits that demanded proper chemistry and conformance for the necessary effect but little else. The needs and requirements of the Manhattan project were of a much more precise and specific nature. Spatial and temporal specifications were reduced from centimeters and milliseconds to micrometers and nanoseconds. New theory and computational tools were required along with a raft of new experimental techniques and novel ways of interpreting the results. Over the next 40 years the emphasis was on higher energy in smaller packages, more precise initiation schemes, better and safer formulations and greater accuracy in forecasting performance. Researchers from many institutions began working in the emerging and expanding field. In the midst of all of the work and progress in precision initiation and scientific study in the early 1960s papers began to appear detailing the first quantitative studies of the transition from deflagration to detonation. DDT first in cast then in pressed explosives and finally in propellants.

**Conduction of Heat in Solids** Horatio Scott Carslaw, J.C. Jaeger, 1980      **Brake Design and Safety** Rudolf Limpert, 2011-10-04

The objectives of this third edition of an SAE classic title are to provide readers with the basic theoretical fundamentals and analytical tools necessary to design braking systems for passenger vehicles and trucks that comply with safety standards, minimize consumer complaints and perform safely and efficiently before and while electronic brake controls become active. This book, written for students, engineers, forensic experts and brake technicians, provides readers with theoretical knowledge of braking physics and offers numerous illustrations and equations that make the information easy to understand and apply. New to this edition are expanded chapters on Thermal analysis of automotive brakes, Analysis of hydraulic brake systems, Single vehicle braking dynamics.

**Solid Freeform Fabrication Symposium Proceedings**, 1995      [International Journal for Housing Science and Its Applications](#), 2002      **Advances in Cold-Region Thermal Engineering and Sciences** Kolumban Hutter, Yongqi Wang, Hans Beer, 1999-08-11

This book consists of peer reviewed articles and reviews presented as lectures at the Sixth International Symposium on Thermal Engineering and Sciences for Cold Regions in Darmstadt, Germany. It addresses all relevant aspects of thermal physics and engineering in cold regions such as the Arctic regions. These environments present many unique freezing and melting phenomena and the relevant heat and mass transfer processes are of basic importance with respect to both the technological applications and the natural context in which they occur. Intended for physicists

engineers geoscientists climatologists and cryologists alike these proceedings cover topics such as ice formation and decay heat conduction with phase change convection with freezing and melting thermal properties at low temperature frost heave and permafrost climate impact in cold regions thermal design of structures bio engineering in cold regions and many more
