Celestial Navigation David Burch,2016-03-04 This book has been used for 30 years updated periodically as needed More than 20 000 students have successfully learned ocean navigation from these materials and gone on to cross oceans or circumnavigate the globe This book covers how to find position at sea from timed sextant sights of the sun moon stars and planets plus other routine and special procedures of safe efficient offshore navigation No previous navigation experience is required The only math involved is arithmetic adding and subtracting angles and times This is a practical how to do it book which also includes clear explanations of how it works and how to do it well Plus this book includes other crucial factors of ocean navigation besides just finding out where you are from the stars such as logbook procedures dead reckoning error analysis route planning and more At the end of this book you will be ready for ocean navigation The book includes text practice problems tables selections detailed glossary and full solutions Printable work forms plotting sheets and other resources are available at no charge from www.starpath.com celnavbook Preface to the Second Edition We are pleased to say that after ten more years of using this text we do not find reason to change the basic approach and methods of the teaching We still use most of the same examples which are now quite old but that is the beauty of celestial navigation It has not changed so we do not benefit in any way from making all new examples which would bring with them more chance of error in a book of many numbers We have however notably improved and expanded the book Each section has been updated and reformatted for a clearer presentation often in response to student questions over the years New graphics have been added and older ones all updated There is much new content in the text especially in the In Depth chapter including more detailed discussion of the sailings and more background on the principles New sections were added on general ocean navigation and optimizing the fixes We have also updated the electronic navigation section as most ocean navigators will also be using other tools besides celestial

Celestial Navigation Jeff Toghil,1986-06-03 To the uninitiated celestial navigation appears to be a

somewhat frightening exercise in mathematics In fact the maximum mathematics involved in the new sight reduction systems is the addition of three lines of figures Similarly the apparent complexities of the solar and stellar systems take on a less frightening appearance when related to the lighthouses and similar earthly objects used for coastal navigation Throughout this book the author uses such a comparison between earthly and heavenly objects in explaining the close relationship between coastal and celestial navigation In doing so he reduces a complex subject to a simple and interesting one that can be absorbed by even the most non mathematically minded The book concentrates for much of its length on the plotting of the boat's position by sun planets and stars when out of sight of land It also deals with related navigational routines such as checking the compass by using heavenly objects taking radio time signals and adjusting the sextant for day to day corrections This is celestial navigation in its simplest form presented in a way which even the most amateur navigator can understand and absorb

Celestial Navigation When Your GPS Fails Mark Breach, 2004 Celestial Navigation When Your GPS Fails is about finding position at sea from the Sun Moon planets or stars If you have a sextant and the time in both senses this book contains all you need to find your position This book is for real and aspiring bluewater sailors those who leave the sight of land and rely on various electronic devices for navigation When satellite navigation fails because of seawater in the electronics or just plain battery failure then being lost at sea is a life threatening situation especially when night falls Everything you need is here apart from the sextant and a watch A calculator is handy but not essential There is complete instruction on how to use a sextant on making astronomical observations and on how to do the calculations with or without the forms All tables and the forms needed to make the calculations are available You do not need any further almanacs or tables for the next ten years The text explains the celestial framework in which we must operate with particular reference to the way that the Sun Moon stars and planets appear and the principles of astronomical navigation The sextant is described along with its errors and the necessary corrections that need to be applied Reductions of observations for dip refraction semi diameter of bodies and parallax are covered With the theory well established the practicalities of position finding are explained in detail There is a chapter on the origins of some of the formulae used for those who want a deeper understanding of the mathematics involved but this may be omitted by those who prefer to focus more on the practice of position finding The main text concludes with a detailed worked example and blank forms for your own observations of celestial bodies and for the calculation of position All the tables that you will need are included All the other tables that you might need depending on when and where you are going are on the Celestial Navigation website

A *Primer of Celestial Navigation* Philip Rose (Writer of A primer of celestial navigation),2006 **Celestial Navigation** Jack Case, M. A.,2016-07-11 If you are looking for something to enable you to rote learn only what you need to pass an exam without real understanding then sorry this is not the book for you If however you want a book that will not only help you to pass exams but also teach you to navigate and to understand what you are doing then you have come to the right place This unique self teach course comprehensively covers all elements of the examination syllabuses of the main sailing associations Traditional methods of celestial navigation are taught in a way that is easier faster and more accurate than other methods and does not rely on vast tables of data other than the Nautical Almanac Although the prime aim of the course is to teach the practical skills of celestial navigation it is emphasised that without knowledge skill is nothing At the same time it is recognised that students quickly lose interest if they are expected to plough through reams of theory before they can get down to the business of learning the skills With this in mind this course has been uniquely designed to teach the important skills from the outset while tying in the relevant theory as progress is made There are numerous examples and self test exercises which enhance the learning process and help to embed the knowledge and skills needed to practise the art of celestial navigation Although it is a large book containing 324 letter size pages it is thoroughly cross referenced and its layout enables the reader to move from one section to another without having to read it from beginning to end With regard to the mathematical aspects of the subject the author has adopted a language style which allows the text to flow smoothly and makes for enjoyable reading which is a departure from the stilted academic language of many text books Note The terms celestial navigation and astro navigation are generally regarded as synonymous For further information The Astro Navigation Demystified website provides a free resource for all those interested in the subject www.astronavigationdemystified.com
