**A Practical Guide to Global Point-of-Care Testing** Mark

Shephard OAM, 2016-11-01 Point of care testing (POCT) refers to pathology testing performed in a clinical setting at the time of patient consultation generating a rapid test result that enables informed and timely clinical action to be taken on patient care. It offers patients greater convenience and access to health services and helps to improve clinical outcomes. POCT also provides innovative solutions for the detection and management of chronic, acute and infectious diseases in settings including family practices, Indigenous medical services, community health facilities, rural and remote areas and in developing countries where health care services are often geographically isolated from the nearest pathology laboratory.

A Practical Guide to Global Point of Care Testing shows health professionals how to set up and manage POCT services under a quality assured, sustainable, clinically and culturally effective framework as well as understand the wide global scope and clinical applications of POCT. The book is divided into three major themes: the management of POCT services, a global perspective on the clinical use of POCT and POCT for specific clinical settings. Chapters within each theme are written by experts and explore wide ranging topics such as selecting and evaluating devices, POCT for diabetes, coagulation disorders, HIV, malaria and Ebola, and the use of POCT for disaster management and in extreme environments. Figures are included throughout to illustrate the concepts, principles and practice of POCT.

Written for a broad range of practicing health professionals from the fields of medical science, health science, nursing, medicine, paramedic science, Indigenous health, public health, pharmacy, aged care and sports medicine, A Practical Guide to Global Point of Care Testing will also benefit university students studying these health related disciplines.

**Practical Guide to Implementing Liquid Chromatography Mass Spectrometry in Clinical Laboratories** Y. Victoria Zhang, Uttam Garg, 2025-11-23

Mass spectrometry coupled with liquid chromatography has been proven to be a powerful platform for essential testing for patients in clinical laboratories. It offers numerous advantages over traditional immunoassays to better serve patient needs. However, there are many challenges in implementing this technology and gaining wide applications in clinical practices. Major reasons are lack of systematic training and lack of understanding of the technology by medical technologists and laboratory scientists. Mass spectrometry analyses are relatively complex, labor intensive and often involve manual processes. Successful implementation of the technology in a clinical laboratory requires a deep understanding of mass spectrometry. It also requires sufficient troubleshooting knowledge for routine operations. In addition, majority of the assays are laboratory developed tests which require in-depth understanding of the technology as well as regulations to successfully develop and implement new assays in the clinical laboratories. This book discusses practical applications of clinical mass spectrometry covering topics from its implementation in the lab, routine maintenance and troubleshooting to assay development, validation, maintenance and to regulatory considerations. LC MS/MS is a hands-on technology. Its manual process nature highlights the challenges on daily operations. Given the increasing demand for mass spectrometry in the clinical laboratory and the lack of trained technologists and laboratory scientists at all levels to operate, maintain and develop methods for those instruments, this book

is intended to be a practical guide for clinical mass spectrometry Furthermore this book provides step by step instructions on how to develop and validate an assay Practical Guide to Implementing Liquid Chromatography Mass Spectrometry in Clinical Laboratories is a valuable resource for clinical laboratories that implement mass spectrometry into their practice It serves a reference for medical technologists and clinical laboratory scientists to gain practical guidance on how to best utilize the clinical mass spectrometry platform to best serve patient needs
