A SIMPLE GUIDE TO CLOUD COMPUTING

It is important to know that there are different Cloud Models and there are different deployment strategies, each providing businesses with different levels of flexibility and control.

So, what are the different CLOUD MODELS?

IaaS
/'Iaas/
(Infrastructure-as-a-Service)

1. This model provides all the building blocks for Cloud Computing.

2. These hardware-related services include things like storage, computers or virtual servers.

PaaS
/'Paas/
(Platform-as-a-Service)

1. With this approach, the organisation doesn't need to manage any underlying infrastructure, allowing you to focus on the deployment and management of business apps.

SaaS
/'Saas/
(Software-as-a-Service)

1. As the name suggest, this model includes a complete software offering managed and run on the Cloud by a service provider.

2. A great example of SaaS is web-based email apps like Gmail from Google servers.

What are the different deploying strategies to CLOUD COMPUTING?

Public Cloud
/Public Cloud/

1. This deployment model sees your entire Cloud infrastructure located on the premises of a Cloud Computing company that offers you a Cloud service.

2. As a business owner, you have no physical control over the infrastructure and share your service provider's resources with their other customers.

Private Cloud
/Private Cloud/

1. A private network functions entirely for a single customer or organisation. It's not shared with others and can be hosted externally or on-premise.

2. Levels of security and control are highest when using a private network.

Hybrid Cloud
/Hybrid Cloud/

1. With hybrid Cloud, businesses will deploy a mix of both public and private Cloud depending on their needs.

2. This suits organisations wanting to host critical business apps on private Clouds and apps with fewer security concerns on public Clouds.
