Curves and Surfaces in Geometric Modeling Jean H. Gallier,2000 Curves and Surfaces in Geometric Modeling Theory and Algorithms offers a theoretically unifying understanding of polynomial curves and surfaces as well as an effective approach to implementation that you can apply to your own work as a graduate student scientist or practitioner The focus here is on blossoming the process of converting a polynomial to its polar form as a natural purely geometric explanation of the behavior of curves and surfaces This insight is important for more than just its theoretical elegance the author demonstrates the value of blossoming as a practical algorithmic tool for generating and manipulating curves and surfaces that meet many different criteria You ll learn to use this and other related techniques drawn from affine geometry for computing and adjusting control points deriving the continuity conditions for splines creating subdivision surfaces and more It will be an essential acquisition for readers in many different areas including computer graphics and animation robotics virtual reality geometric modeling and design medical imaging computer vision and motion planning BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Optimal Surface Fitting of Point Clouds Using Local Refinement Gaël Kermarrec, Vibeke Skytt, Tor Dokken, 2022-12-14 This open access book provides insights into the novel Locally Refined B spline LR B spline surface format which is suited for representing terrain and seabed data in a compact way It provides an alternative to the well know raster and triangulated surface representations An LR B spline surface has an overall smooth behavior and allows the modeling of local details with only a limited growth in data volume In regions where many data points belong to the same smooth area LR B splines allow a very lean representation of the shape by locally adapting the resolution of the spline space to the size and local shape variations of the region The iterative method can be modified to improve the accuracy in particular domains of a point cloud The use of statistical information criterion can help determining the optimal threshold the number of iterations to perform as well as some parameters of the underlying mathematical functions degree of the splines parameter representation The resulting surfaces are well suited for analysis and computing secondary information such as contour curves and minimum and maximum points Also deformation analysis are potential applications of fitting point clouds with LR B splines
