Höllerer, Dennis Jancsary, 2023-05-17 This edited volume brings together two largely separate fields organization studies and multimodal social semiotics to develop an integrated research agenda for the novel interdisciplinary field of organizational semiotics Organizations whether for profit non profit or governmental dominate much of everyday life and multimodal communication is not only an output of organizations but is also constitutive of them This volume argues in particular for the importance of organization studies for social semioticians not just as a site of application but also as a critical contemporary context that requires novel and expanded methods of analysis and critique and new practices of partnership The volume addresses a range of institutions and sectors from civil to retail to medical from corporations to universities and reveals how a deep engagement with their meaning making practices produces insights not just about communication but also about the broader contemporary cultural context in which organizations play such a significant role Fundamentally it reveals that the rich analytical and theoretical resources of multimodal perspectives on organizations studies can and should make a fundamental contribution to our understanding of organizations in social life This volume is relevant to social semioticians and organizational researchers as well as to practitioners and decision makers in organizations Parallel Programming Thomas Rauber, Gudula Rünger, 2023-04-04 This textbook covers the new development in processor architecture and parallel hardware It provides detailed descriptions of parallel programming techniques that are necessary for developing efficient programs for multicore processors as well as for parallel cluster systems and supercomputers The book is structured in three main parts covering all areas of parallel computing the architecture of parallel systems parallel programming models and environments and the implementation of efficient

application algorithms The emphasis lies on parallel programming techniques needed for different architectures In particular this third edition includes an extended update of the chapter on computer architecture and performance analysis taking new developments such as the aspect of energy consumption into consideration The description of OpenMP has been extended and now also captures the task concept of OpenMP The chapter on message passing programming has been extended and updated to include new features of MPI such as extended reduction operations and non blocking collective communication operations The chapter on GPU programming also has been updated All other chapters also have been revised carefully The main goal of this book is to present parallel programming techniques that can be used in many situations for many application areas and to enable the reader to develop correct and efficient parallel programs Many example programs and exercises are provided to support this goal and to show how the techniques can be applied to further applications The book can be used as a textbook for students as well as a reference book for professionals The material of the book has been used for courses in parallel programming at different universities for many years
