

Q.4 write a short note on system international (S.I)?

Ans. In 1960 an international conference was held near Parisian which it was decided to introduce such a system of unites which could be used all over the world so they introduce system international 2-e S.I

This system is based on seven basic quantities which are given in table 1 of Q.3.

Q.5 what are prefixes? Why we use it?

Ans. **Prefixes**:- the multiples and submultiples of the power of 10 which are used with basic units, they have their own specific names and symbols and they are called prefixes like kilo (10^3), milli (10^{-3}) etc.

Need of prefixes:- some time we have to deal with quantities that are either very small or very large as compared to basic unit in such cases we need to use prefixes.

For example:- to measure the thickness of a paper we use smaller smaller unit like milli meter (.mm) rather than meter (m). Similarly if we want to measure the distance b/w two big cities then we need greater unit like kilometer (km) rather than meter.

This under such conditions for convenience we express the table of prefixes at is given below.

| Power | Prefixe | Symble | Power | Prefixe | Symble | Power | Prifixe | symble |
|------------|---------|--------|-----------|---------|--------|------------|---------|--------|
| 10^{-25} | Atto | A | 10^{-3} | Milli | M | 10^6 | Mega | Mm |
| 10^{-24} | Femto | F | 10^{-2} | Centi | C | 10^9 | Giga | G |
| 10^{-23} | Pico | P | 10^{-1} | Deci | D | 10^{12} | Tera | T |
| 10^{-9} | Nano | N | 10^3 | Deca | De | 10^{-15} | Peta | P |
| 10^{-6} | micro | u | 10^6 | Kilo | k | 10^{-18} | exa | e |

Q.6 what is scientific notation? How we convert a given number in scientific? Explain?

Ans. **Scientific notation**:- A very large number "N" expressed in the form of " M x 10^n " where "m" is a number whose 1st digit is non-zero and "n" is a + ve or - ve power of "10".

Conversion to scientific:- A number "N" can be expressed scientific by following method.

1. Write the number in standard form ie N= 98,000.
2. Put the decimal point after its non - zero digits ie N=9.8000
3. Now multiply 10 with "M" or 9.8 ie 9.8×10^4

of philosophy today as we push forward with innovation in our astonishing leading edge realms Do we really understand what we are doing Do we have any idea where we are going And most chillingly regardless of the answers does it matter The claim is made in this book that the disappearance of philosophy does matter and alarm bells ought to be ringing Why Because the work of philosophy work we seem to have forgotten is essential for us to know where we are going If we are truly serious about surviving and thriving especially by being so innovative in so many spectacular and challenging ways we cannot afford to have philosophy and its works disappear and then be forgotten Said plainly we cannot deny and then lose the maps and compass of philosophy applied to the challenges of today and tomorrow If we do we lose any reason for any journey anywhere And more broadly we are in danger of losing reason generally To continue denying philosophy and then in the end to deny that very denial is a move with no hope of benefit But the lack of evidence for the work of philosophy indicates that move is underway We are destroying any useful link between innovation and philosophy In so doing we are seriously reducing the value of innovation no matter how wonderful we think it might be while blindly forgetting the critical importance of philosophy and its work This move will guarantee that the path to our future will be fraught with unnecessary hardship and difficulty and then if it is permanent will deal a fatal blow If we truly wish to thrive and persevere we are compelled to avoid the fatal error of philosophical denial To do so we must rediscover revitalize and apply anew the rigorous work of philosophy to innovation in our modern era

Socratic Physics George Mathew,N. N. Mathew,1998-09-04 Written in language that students understand the authors present problems in this workbook that help students grasp a conceptual understanding of physics They start first with short manageable questions followed by longer ones Mathematical problem solving is emphasized but not the focus of the problems Rather than repeat what physics textbooks present this workbook uses problems to teach students the fundamentals of physics Each problem builds on the preceding successfully completed one so the students are motivated by their success The authors provide detailed solutions in the workbook for some problems for students to learn how to approach and ultimately to solve problems

counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation *Using and Developing Measurement Instruments in Science Education* Xiufeng Liu, 2020-01-09 This book introduces measurement instruments in science education focusing on Rasch modeling for conceptual understanding affective variables science inquiry learning progression and learning environments It serves as a textbook for graduate courses and a reference for science education researchers
