Margenov,Jerzy Wasniewski,Plamen Yalamov,2003-06-30 This book constitutes the thoroughly refereed post proceedings of the Third International Conference on Large Scale Scientific Computing LSSC 2001 held in Sozopol Bulgaria in June 2001 The 7 invited full papers and 45 selected revised papers were carefully reviewed for inclusion in the book The papers are organized in topical sections on robust preconditioning algorithms Monte Carlo methods advanced programming environments for scientific computing large scale computations in air pollution modeling large scale computations in mechanical engineering and numerical methods for incompressible flow     **Scientific Engineering for Distributed Java Applications** Nicolas Guelfi,Egidio Astesiano,Gianna Reggio,2003-02-25 This book constitutes the thoroughly refereed postproceedings of the International Workshop on Scientific Engineering for Distributed Java Applications FIDJI 2002 held in Luxembourg Kirchberg Luxembourg in November 2002 The 16 revised full papers presented together with a keynote paper and 3 abstracts were carefully selected from 33 submissions during two rounds of reviewing and improvement Among the topics addressed are Java coordination Web service architectures transaction models CORBA based distributed systems mobile objects Java group toolkits distributed process management systems active objects in J2EE Java frameworks Jini component based distributed applications Java middleware fault tolerant mobile systems

**Programming Distributed Computing Systems** Carlos A. Varela,2013-05-31 An introduction to fundamental theories of concurrent computation and associated programming languages for developing distributed and mobile computing systems Starting from the premise that understanding the foundations of concurrent programming is key to developing distributed computing systems this book first presents the fundamental theories of concurrent computing and then introduces the programming languages that help develop distributed computing systems at a high level of abstraction The major theories of concurrent computation including the calculus the actor model the join calculus and mobile ambients are explained with a focus on how they help design and reason about distributed and mobile computing systems The book then presents programming languages that follow the theoretical models already described including Pict SALSA and JoCaml The parallel structure of the chapters in both part one theory and part two practice enable the reader not only to compare the different theories but also to see clearly how a programming language supports a theoretical model The book is unique in bridging the gap between the theory and the practice of programming distributed computing systems It can be used as a textbook for

graduate and advanced undergraduate students in computer science or as a reference for researchers in the area of programming technology for distributed computing By presenting theory first the book allows readers to focus on the essential components of concurrency distribution and mobility without getting bogged down in syntactic details of specific programming languages Once the theory is understood the practical part of implementing a system in an actual programming language becomes much easier Proceedings of the ACM ... Java Grande/ISCOPE Conference ,2002

Operating Systems Jean Bacon,Tim Harris,2003 Annotation Both theory and practice are blended together in order to learn how to build real operating systems that function within a distributed environment An introduction to standard operating system topics is combined with newer topics such as security microkernels and embedded systems This book also provides an overview of operating system fundamentals For programmers who want to refresh their basic skills and be brought up to date on those topics related to operating systems Foundations of Multithreaded, Parallel, and Distributed Programming Gregory R. Andrews,2000 Foundations of Multithreaded Parallel and Distributed Programming covers and then applies the core concepts and techniques needed for an introductory course in this subject Its emphasis is on the practice and application of parallel systems using real world examples throughout Greg Andrews teaches the fundamental concepts of multithreaded parallel and distributed computing and relates them to the implementation and performance processes He presents the appropriate breadth of topics and supports these discussions with an emphasis on performance Features Emphasizes how to solve problems with correctness the primary concern and performance an important but secondary concern Includes a number of case studies which cover such topics as pthreads MPI and OpenMP libraries as well as programming languages like Java Ada high performance Fortran Linda Occam and SR Provides examples using Java syntax and discusses how Java deals with monitors sockets and remote method invocation Covers current programming techniques such as semaphores locks barriers monitors message passing and remote invocation Concrete examples are executed with complete programs both shared and distributed Sample applications include scientific computing and distributed systems 0201357526B04062001 *Designing Concurrent, Distributed, and Real-time Applications with UML* Hassan Gomaa,2000 Suitable for real world systems that deal with complex issues such as concurrency and real time constraints Providing detailed guidelines this book is useful for software engineers **JGI '02 ACM Special Interest Group on Programming Languages**,2002 Concurrent Programming in Java Douglas Lea,2000 Software Programming Languages

*Distributed Computing* M. L. Liu,Mei-Ling L. Liu,2004 Distributed Computing provides an introduction to the core concepts and principles of distributed programming techniques It takes a how to approach where students learn by doing Designed for students familiar with Java the book covers programming paradigms protocols and application program interfaces API s including RMI COBRA IDL WWW and SOAP Each chapter introduces a paradigm and or protocol and then presents the use of a DPI that illustrates the concept The presentation uses narrative code examples and diagrams designed

to explain the topics in a manner that is clear and concise End of chapter exercises provide analytical as well as hands on exercises to prompt the reader to practice the concepts and the use of API s covered throughout the text Using this text students will understand and be able to execute basic distributed programming techniques used to create network services and network applications including Internet applications      *Proceedings of the Twenty-ninth SIGCSE Technical Symposium on Computer Science Education* John Lewis,1998
