The following steps should be performed by a qualified service technician.

To ensure long life and high efficiency, clean recommended dirt and grease from blower wheel and motor assembly.

The inducer and blower motors are pre-lubricated and require no additional lubrication. These motors can be identified by the absence of oil ports on each end of the motor.

Clean blower motor and wheel as follows:

1. Turn off electrical supply to furnace.
2. Remove 2 screws from outer door and then remove outer door.

3. Vent pipe through furnace casting termination only. For down-flow or horizontal furnaces having vent pipes within the furnace that pass in front of the blower door:

  - b. Disconnect and remove short piece of vent pipe from within furnace.
4. Remove 2 screws from blower door and remove blower door.
5. Disconnect blower leads from furnace control. Note wire color and location for reassembly. All other factory wires can be left connected, but field thermostat connections may need to be disconnected depending on their length and wiring.
6. Remove 2 screws securing control and transformer support to furnace panel.
7. Swing control and transformer support to front of furnace casting and away from blower compartment.
8. Remove 2 screws holding blower assembly to blower deck and slide blower assembly out of furnace.
9. Clean blower wheel and motor ratings vacuum with soft brush attachment. Do not remove or disturb balance weights (clips) on blower wheel blades. The blower wheel should not be dropped or bent as balance will be affected.
