Articular Cartilage -- from Basic Science Structural Imaging to Non-invasive Clinical Quantitative Molecular Functional Information for AI Classification and Prediction Bodo

Kurz,Thomas Lange,Marita Voelker,Melanie L. Hart,Bernd Rolauffs,2023 Abstract This review presents the changes that the imaging of articular cartilage has undergone throughout the last decades It highlights that the expectation is no longer to image the structure and associated functions of articular cartilage but instead to devise methods for generating non invasive function depicting images with quantitative information that is useful for detecting the early pre clinical stage of diseases such as primary or post traumatic osteoarthritis OA PTOA In this context this review summarizes a the structure and function of articular cartilage as a molecular imaging target b quantitative MRI for non invasive assessment of articular cartilage composition microstructure and function with the current state of medical diagnostic imaging c non destructive imaging methods c non destructive quantitative articular cartilage live imaging methods d artificial intelligence AI classification of degeneration and prediction of OA progression and e our contribution to this field which is an AI supported non destructive quantitative optical biopsy for early disease detection that operates on a digital tissue architectural fingerprint Collectively this review shows that articular cartilage imaging has undergone profound changes in the purpose and expectations for which cartilage imaging is used the image is becoming an AI usable biomarker with non invasive quantitative functional information This may aid in the development of translational diagnostic applications and preventive or early therapeutic interventions that are yet beyond our reach
