*Handbook of Information and Communication Security* Peter Stavroulakis, Mark Stamp, 2010-02-23 At its core information security deals with the secure and accurate transfer of information While information security has long been important it was perhaps brought more clearly into mainstream focus with the so called Y2K issue The Y2K scare was the fear that computer networks and the systems that are controlled or operated by software would fail with the turn of the millennium since their clocks could lose synchronization by not recognizing a number instruction with three zeros A positive outcome of this scare was the creation of several Computer Emergency Response Teams CERTs around the world that now work operatively to exchange expertise and information and to coordinate in case major problems should arise in the modern IT environment The terrorist attacks of 11 September 2001 raised security concerns to a new level The international community responded on at least two fronts one front being the transfer of reliable information via secure networks and the other being the collection of information about potential terrorists As a sign of this new emphasis on security since 2001 all major academic publishers have started technical journals focused on security and every major communications conference for example Globecom and ICC has organized workshops and sessions on security issues In addition the IEEE has created a technical committee on Communication and Information Security The first editor was intimately involved with security for the Athens Olympic Games of 2004

*Computer Networks and Systems* Thomas G. Robertazzi, 2012-12-06 Statistical performance evaluation has assumed an increasing amount of importance as we seek to design more and more sophisticated communication and information processing systems The ability to predict a proposed system's performance before one constructs it is an extremely cost effective design tool This book is meant to be a first year graduate level introduction to the field of statistical performance evaluation It is intended for people who work with statistical performance evaluation including engineers computer scientists and applied mathematicians As such it covers continuous time queueing theory chapters 1-4 stochastic Petri networks chapter 5 discrete time queueing theory chapter 6 and recent network traffic modeling work chapter 7 There is a short appendix at the end of the book that reviews basic probability theory This material can be taught as a complete semester long course in performance evaluation or queueing theory Alternatively one may teach only chapters 2 and 6 in the first half of an introductory computer networking course as is done at Stony Brook The second half of the course could use a more protocol oriented text such as ones by Saadawi SAAD or Stallings STALL What is new in the third edition of this book In addition to the well received material of the second edition this edition has three major new features

*Forthcoming Books* Rose Arny, 2004

**Parallel Programming** Thomas Rauber, Gudula Rünger, 2013-06-13 Innovations in hardware architecture like hyper threading or multicore processors mean that parallel computing resources are available for inexpensive desktop computers In only a few years many standard software products will be based on concepts of parallel programming implemented on such hardware and the range of applications will be much broader than that of scientific

computing up to now the main application area for parallel computing Rauber and Renger take up these recent developments in processor architecture by giving detailed descriptions of parallel programming techniques that are necessary for developing efficient programs for multicore processors as well as for parallel cluster systems and supercomputers Their book is structured in three main parts covering all areas of parallel computing the architecture of parallel systems parallel programming models and environments and the implementation of efficient application algorithms The emphasis lies on parallel programming techniques needed for different architectures For this second edition all chapters have been carefully revised The chapter on architecture of parallel systems has been updated considerably with a greater emphasis on the architecture of multicore systems and adding new material on the latest developments in computer architecture Lastly a completely new chapter on general purpose GPUs and the corresponding programming techniques has been added The main goal of the book is to present parallel programming techniques that can be used in many situations for a broad range of application areas and which enable the reader to develop correct and efficient parallel programs Many examples and exercises are provided to show how to apply the techniques The book can be used as both a textbook for students and a reference book for professionals The material presented has been used for courses in parallel programming at different universities for many years

*Eighth IEEE International Symposium on Computers and Communication*, 2003 ISCC 2003 focuses on all aspects of computers communications and service provisioning over the enhanced global telecommunications networks The proceedings covers comprehensive topics in research and applications areas such as network reliability and quality of service wireless cellular and mobile communications mobile ad hoc networks distributed systems control and optimization of communication systems and security privacy and information access

Supercomputer Simulations in Chemistry Michel Dupuis, 2012-12-06 Awareness of the need and potential of supercomputers for scientific and engineering research has grown tremendously in the past few years It has culminated in the Super computer Initiative undertaken two years ago by the National Science Foundation and presently under full development in the United States Similar initiatives are under way in several European countries and in Japan too Thus the organization of a symposium on Supercomputer Simulations in Chemistry appeared timely and such a meeting was held in Montreal Canada in August 1985 sponsored by IBM Kingston and IBM Canada and organized by Dr Enrico Clementi and Dr Michel Dupuis In connection with this IBM's support of the Cornell University Supercomputer Center several projects in the IBM Research Division the experimental parallel engine ICAP assembled at IBM Kingston and the announcement Fall 1985 of an add on vector feature to the 3090 IBM mainframe underscore IBM's commitment to high end scientific engineering computing The papers presented in this volume discuss topics in quantum mechanical and statistical mechanical simulations both of which test the limits of computer hardware and software Already a great deal of effort has been put into using vector supercomputers in these two areas Much more is needed and without doubt is bound to happen To start an historical perspective of computational

quantum chemistry is provided by Professor Lwdin The contribution by Ohno and co workers gives an indication of the present status of Japanese supercomputers Kutzelnigg et al Bauschlicher et al and Guest et al
