COMSOL5 for Engineers Mehrzad Tabatabaian, 2015-08-07 COMSOL5 Multiphysics is one of the most valuable software modeling tools for engineers and scientists. This book introduces multiphysics modeling techniques and examples accompanied by practical applications using COMSOL5 x. The mathematical fundamentals, engineering principles and design criteria are presented as integral parts of the examples. At the end of chapters are references that contain more in-depth physics technical information and data these are referred to throughout the book and used in the examples. *GeoVadis* Ashish Juneja, Anil Joseph, Dasaka S. Murty, 2025-09-16 This book contains a prolific compilation of research on geotechnical engineering presented at the First Geotech Asia International Conference GAIC 2025. The papers reflect dynamic engagement of researchers, engineers and professionals from all over Asia to offer insights into ongoing developments and applied problem solving. This publication brings together contributions across 19 technical themes including cold region geotechnics, deep excavations, earthquake engineering, foundation systems and underground construction. It also delves into artificial intelligence and machine learning applications, environmental and transportation geotechnics, site characterisation, slope stability, embankments and dams, and ground improvement techniques. It is intended for academics, practising engineers, consultants, contractors, industry professionals, government authorities and students involved in geotechnical research, education and design and implementation. Instabilities in alpine permafrost: strength and stiffness in a warming regime Yuko Yamamoto, 2014-08-20 Alpine permafrost exists at high altitude at lower latitudes such as in the Swiss Alps. Accelerating climate change including rising mean annual air temperature and extreme rainfall conditions in alpine regions induces permafrost degradation. The warming of permafrost causes accelerated creep of rock glaciers due to increased unfrozen water content and higher deformability of the ice phase. Recently the development of deepening depressions has been observed in several rock glaciers in Switzerland and the changes in land surface characteristics and drainage systems may initiate slope instabilities in rock glaciers. The main aim of this thesis is to characterise the strength and stiffness of alpine frozen soil in rock glaciers. To this end the geotechnical response such as creep and failure of frozen soil was investigated through a triaxial stress path testing programme with novel measurement systems for detecting acoustic emissions and measuring volumetric change. In addition the resistance to crack initiation and propagation was investigated through a beam bending test programme on rectangular artificially frozen soil specimens using the acoustic emission measurement system. The evaluation of laboratory tests on artificially frozen soil specimens implied that the development of deep depressions in rock glaciers occurs through differential creep and thermal degradation and that the rate of deformation has the potential to lead to instabilities in rock glaciers. A comparison of the simulation results with the experimental data demonstrated that the semi coupled model was

successful in simulating the most important aspects of the temperature dependent stress strain relationship for the frozen soil behaviour that was measured at the element scale This thesis contributes to an understanding of the variations in geotechnical response of alpine permafrost by investigating the behaviour of artificially frozen soil specimens experimentally and numerically with time and temperature under specific stress paths However further investigations are necessary to assess the long term stability of rock glaciers affected by climate change [Energy Geotechnics](#) Frank Wuttke, Sebastian Bauer, Marcelo Sanchez, 2016-12-01 Energy Geotechnics includes 97 technical papers presented at the 1st International Conference on Energy Geotechnics ICEGT 2016 Kiel Germany 29 31 August 2016 The contributions provides significant advances and critical challenges facing the areas of fundamentals constitutive and numerical modelling testing techniques and energy geotechnics applications Energy Geotechnics contains seven regular sessions and six minisymposia with contributions on discrete and continuum based modelling as well as investigations based on experimental studies at various scales The papers on discrete and continuum based modelling examine the behaviour of gas hydrate sediments cyclic and Themo Hydro Mechanical T H M modelling of energy piles non linear behaviour of energy geo storage and geo structures deformation of geomaterials modelling of borehole heat exchangers and energy walls analysis of hydraulic fracturing and discontinuities in reservoirs engineering problems involving gas hydrates sediments and modelling of environmental impact of energy geotechnical processes [Inorganic and Organic Thin Films](#) Yujun Song, 2021-07-19 Learn more about
