Promising Practices in Undergraduate Science, Technology, Engineering,

and Mathematics Education National Research Council,Division of Behavioral and Social Sciences and Education,Board on Science Education,Planning Committee on Evidence on Selected Innovations in Undergraduate STEM Education,2011-05-19 Numerous teaching learning assessment and institutional innovations in undergraduate science technology engineering and

mathematics STEM education have emerged in the past decade. Because virtually all of these innovations have been developed independently of one another their goals and purposes vary widely. Some focus on making science accessible and meaningful to the vast majority of students who will not pursue STEM majors or careers others aim to increase the diversity of students who enroll and succeed in STEM courses and programs still other efforts focus on reforming the overall curriculum in specific disciplines. In addition to this variation in focus these innovations have been implemented at scales that range from individual classrooms to entire departments or institutions. By 2008 partly because of this wide variability it was apparent that little was known about the feasibility of replicating individual innovations or about their potential for broader impact beyond the specific contexts in which they were created. The research base on innovations in undergraduate STEM education was expanding rapidly but the process of synthesizing that knowledge base had not yet begun. If future investments were to be informed by the past then the field clearly needed a retrospective look at the ways in which earlier innovations had influenced undergraduate STEM education. To address this need the National Research Council NRC convened two public workshops to examine the impact and effectiveness of selected STEM undergraduate education innovations. This volume summarizes the workshops which addressed such topics as the link between learning goals and evidence promising practices at the individual faculty and institutional levels classroom based promising practices and professional development for graduate students new faculty and veteran faculty. The workshops concluded with a broader examination of the barriers and opportunities associated with systemic change.

The first of its kind in the English language to examine the Portuguese Atlantic World in the period from 1750 to 1850 this book reveals that despite formal separation the links and relationships that survived the demise of empire entwined the historical trajectories of Portugal and Brazil even more deeply.
