Mathematical Models and Numerical Methods for Full Wave Analysis of Prolate and Oblate Spheroidal Conformal Microwave Components Saif Al-Hasson, 2014-08-29 Conformal components are used nowadays at higher rate than ever before They can be found in curved mobile phones communication navigation and imaging systems in land water air and space vehicles The integration of those components within the external structure became of significant importance for aerodynamic electromagnetic aesthetic or physical reasons As a result many mathematical models were previously developed to analyze and optimize such conformed devices In this thesis we contributed to this field by developing various models for full wave analysis of spheroidal components As a starting point mathematical formulas for conforming antennas on oblate and prolate spheroids were obtained Those conformation methods were validated by conforming many antennas on spheroidal surfaces They were then used to formulate Method of Moments equations with spheroidally curved current functions for analyzing wire antennas of random shape conformed to spheroids in the frequency domain The complete model was applied to a conformal Archimedean spiral antenna on an oblate spheroid and showed that the conformed spiral has similar current distribution as its planar counterpart but produces an unsymmetrical radiation pattern The obtained model was then extended to spheroidal multi layer structures by integrating the spheroidal dyadic Green's Function within its mathematical derivation However due to a detected divergence in that function the model couldn't be implemented On the side of time based analysis methods a Finite Difference Time Domain method was developed for closed oblate and prolate spheroidal structures Alternative formulas for the structure's singularities and the condition of numerical stability were derived as well The obtained model was then validated and used to characterize spheroidal cavities in the time and frequency domains The method was extended later to unbounded spheroidal domain by deriving the Absorbing Boundary Conditions using the One Way Wave method The whole model was then applied to characterize a patch antenna conformed to a prolate spheroid Finally an analytical solution for the transient fields in spherical multilayer media energized by spherical harmonics source and an algorithm for tracing back the path of all the reflected waves were obtained The model was applied to different multilayer structures where the transient response was obtained and validated against a numerical solution

Standard Mathematical Tables and Formulas Daniel Zwillinger, 2018-01-03 Containing more than 6 000 entries CRC Standard Mathematical Tables and Formulas 33rd Edition continues to provide essential formulas tables figures and detailed descriptions The newest edition of this popular series also features many diagrams group tables and integrals that are not available online This edition also incorporates important topics such as max plus algebra financial options pseudospectra and proof methods Newly updated topics reflecting new results include couple analogues radar and significant equations of mathematics New features of the 33rd edition include Larger trim size five new topics and topics which have been modified

to update results Provides practical ready to use information and covers important topics that are unfamiliar to many readers such as visual proofs and sequences Includes hard to find and more complete information than found in the Internet such as table of conformal mappings and integral tables Adds descriptions of new functions Lambert prolate spheroidal and Weierstrass Even though the book has been updated it retains the same successful format of previous editions in that material is still presented in a multi sectional format Instruction and Training for Enhanced Reference Service ,1998

Electrochemistry and Corrosion Science Nestor Perez,2016-09-13 The second edition of this textbook includes refined text in each chapter new sections on corrosion of steel reinforced concrete and on cathodic protection of steel reinforced bars embedded in concrete and some new solved examples The book introduces mathematical and engineering approximation schemes for describing the thermodynamics and kinetics of electrochemical systems which are the essence of corrosion science in addition to electrochemical corrosion forms of corrosion and mechanisms of corrosion This approach should capture the reader s attention on the complexity of corrosion Thus the principles of electrochemistry and electrochemical cells are subsequently characterized in simple electrolytes from a thermodynamics point of view
