Hybrid Classifiers Michal Wozniak, 2013-09-16 This book delivers a definite and compact knowledge on how hybridization can help improving the quality of computer classification systems In order to make readers clearly realize the knowledge of hybridization this book primarily focuses on introducing the different levels of hybridization and illuminating what problems we will face with as dealing with such projects In the first instance the data and knowledge incorporated in hybridization were the action points and then a still growing up area of classifier systems known as combined classifiers was considered This book comprises the aforementioned state of the art topics and the latest research results of the author and his team from Department of Systems and Computer Networks Wroclaw University of Technology including as classifier based on feature space splitting one class classification imbalance data and data stream classification

Estimating the Query Difficulty for Information Retrieval David Carmel, Elad Yom-Tov, 2022-05-31 Many information retrieval IR systems suffer from a radical

variance in performance when responding to users queries Even for systems that succeed very well on average the quality of results returned for some of the queries is poor Thus it is desirable that IR systems will be able to identify difficult queries so they can be handled properly Understanding why some queries are inherently more difficult than others is essential for IR and a good answer to this important question will help search engines to reduce the variance in performance hence better servicing their customer needs Estimating the query difficulty is an attempt to quantify the quality of search results retrieved for a query from a given collection of documents This book discusses the reasons that cause search engines to fail for some of the queries and then reviews recent approaches for estimating query difficulty in the IR field It then describes a common methodology for evaluating the prediction quality of those estimators and experiments with some of the predictors applied by various IR methods over several TREC benchmarks Finally it discusses potential applications that can utilize query difficulty estimators by handling each query individually and selectively based upon its estimated difficulty Table of Contents
