

6. The subroutine CHAR_TO_CODE(character) returns the integer ASCII value of a character. For example:

CHAR_TO_CODE('a') returns the value 97
CHAR_TO_CODE('z') returns the value 122
CHAR_TO_CODE('') returns the value 96
CHAR_TO_CODE('1') returns the value 123

Develop an algorithm, using either pseudo-code or a flowchart, that:

- asks the user to enter a character
- outputs 'LOWER' if the user has entered a lowercase character
- outputs 'NOT LOWER' if the user has entered any other character.

You must use the built-in CHAR_TO_CODE subroutine in your answer

```
character = USERINPUT
character_code = CHAR_TO_CODE(character)
IF character_code ≥ 97 AND character_code ≤ 122
    OUTPUT 'LOWER'
ELSE
    OUTPUT 'NOT LOWER'
ENDIF

CS Why is a book that presents a straightforward, curiosity-based approach to filling in the blanks around common introductory material taught in Computer Science classes. If you have ever wondered why is that about a programming phenomenon, historical tidbit, or common terminology, this book may have an answer that explains it. Questions include: Why do computers have trouble with floating point numbers? Why is it called Bluetooth? Why does it use that symbol? Why is it called bootstrapping? Why don't modifications to function parameters persist once the function returns? Why do we use the QWERTY keyboard and many more? Perfect for both students and IT professionals, this book provides the clear 'why' to answer so many unstated CS questions. Take any example in the book from base 2 to timezones and you will have an answer that cements your insight on the 'why' of the topic, reinforcing your rote memorization with deeper understanding and insight. *Graded Problems in Computer Science* Andrew D. Here are some common computer science interview questions along with example answers. What motivated you to pursue a career in computer science? Example Answer: I've always been fascinated by technology and its potential to solve complex problems and improve people's lives. From a young age, I enjoyed tinkering with computers and learning how they work. As I grew older, I became intrigued by the endless possibilities of computer science and its applications in various fields, from software development to artificial intelligence. Pursuing a career in computer science allows me to combine my passion for technology with my desire to make a meaningful

impact through innovation and problem solving. Can you describe a challenging programming project you've worked on and how you overcame obstacles?

Example Answer: One challenging programming project I worked on was developing a mobile app for real time navigation in a crowded urban environment. The project involved complex algorithms for route optimization, GPS tracking and user interface design. One obstacle we encountered was optimizing the app's performance while minimizing battery usage on mobile devices. To overcome this challenge we conducted extensive testing, implemented caching mechanisms and optimized the code for efficiency. We also leveraged asynchronous programming techniques to improve responsiveness and minimize resource consumption. By collaborating closely with my team, conducting thorough research and leveraging best practices in software engineering, we were able to successfully overcome obstacles and deliver a high quality product.

How do you stay updated on the latest advancements in computer science?

Example Answer: I stay updated on the latest advancements in computer science through a variety of channels including academic journals, online courses, professional conferences and industry publications. I regularly read research papers and articles in areas of interest such as artificial intelligence, machine learning and cybersecurity. I also participate in online forums and discussion groups to stay informed about emerging trends and technologies. Additionally, I make a point to attend conferences, workshops and webinars to network with experts in the field and learn from their insights and experiences. By staying curious, proactive and engaged in the computer science community, I ensure that I remain current with the latest developments and innovations.

Can you explain the difference between object oriented programming and functional programming?

Example Answer: Object oriented programming (OOP) and functional programming (FP) are two different paradigms for organizing and structuring code. In OOP, programs are organized around objects which encapsulate data and behaviour. Objects interact with each other through methods and messages, and inheritance and polymorphism are key concepts for code reuse and extensibility. In contrast, FP emphasizes functions as first class citizens, treating them as data that can be passed as arguments, returned from other functions and composed together. FP encourages immutability, pure functions and declarative programming style, which can lead to more concise, modular and composable code. While OOP focuses on state and behaviour encapsulation, FP focuses on transformations and compositions of data.

How do you approach debugging and troubleshooting when encountering a software issue?

Example Answer: When encountering a software issue, I follow a systematic approach to debugging and troubleshooting to identify the root cause and implement a solution. I start by reproducing the issue and gathering as much information as possible, including error messages, log files and user feedback. I then analyse the code and review the relevant documentation to understand the expected behaviour and potential sources of the problem. Next, I use debugging tools such as breakpoints, logging statements and code profiling to trace the execution flow and pinpoint the exact location of the issue. Once I've identified the cause of the problem, I develop a plan to address it, which may involve fixing bugs in the code, optimizing performance or updating dependencies. Throughout the process, I communicate regularly with my team members.

and stakeholders providing updates on my progress and seeking input and feedback as needed By approaching debugging and troubleshooting methodically and collaboratively I ensure that software issues are resolved efficiently and effectively
