## **Computer Vision For Visual Effects:**

Computer Vision for Visual Effects Richard J. Radke, 2012-11-19 Modern blockbuster movies seamlessly introduce impossible characters and action into real world settings using digital visual effects. These effects are made possible by research from the field of computer vision, the study of how to automatically understand images. Computer Vision for Visual Effects will educate students, engineers, and researchers about the fundamental computer vision principles and state of the art algorithms used to create cutting edge visual effects for movies and television. The author describes classical computer vision algorithms used on a regular basis in Hollywood such as blue screen matting, structure from motion, optical flow, and feature tracking, and exciting recent developments that form the basis for future effects such as natural image matting, multi-image compositing, image retargeting, and view synthesis. He also discusses the technologies behind motion capture and three-dimensional data acquisition. More than 200 original images demonstrating principles, algorithms, and results, along with in-depth interviews with Hollywood visual effects artists, tie the mathematical concepts to real world filmmaking. Computer Vision for Visual Effects Richard J. Radke, 2013 This book explores the fundamental computer vision principles and state of the art algorithms used to create cutting edge visual effects for movies and television. It describes classical computer vision algorithms and recent developments, features more than 200 original images, and contains in-depth interviews with Hollywood visual effects artists that tie the mathematical concepts to real world filmmaking. Introduction to Visual Effects Bruno Madeira, Luiz Velho, 2022-12-06 Introduction to Visual Effects: A Computational Approach is the first single introduction to the computational and mathematical aspects of visual effects, incorporating both computer vision and graphics. The book also provides the readers with the source code to a library enabling them to follow the chapters directly and build up a complete visual effects platform. The book covers the basic approaches to camera pose estimation, global illumination, and image-based lighting, and includes chapters on the virtual camera optimization and computer vision path tracing, and many more. Key features include: Introduction to projective geometry, image-based lighting, IBL, global illumination solved by the Monte Carlo method, Pathtracing, an explanation of a set of optimization methods and the techniques used for calibrating one, two, and many cameras, including how to use the RANSAC algorithm in order to make the process robust, and providing code to be implemented using the Gnu Scientific Library, C/C++ code using the OpenCV library to be used in the process of tracking points on a movie, an important step for the matchmove process, and in the construction of modeling tools for visual effects, A simple model of the Bidirectional Reflectance Distribution Function (BRDF) of surfaces, and the differential rendering method, allowing the reader to generate consistent shadows supported by a code that can be used in combination with a software like Luminaire HDR. Image and Video-Based Artistic Stylisation Paul Rosin, John Collomosse, 2012-10-29 Non-photorealistic rendering (NPR) is a combination of computer graphics and computer vision that produces renderings in various artistic, expressive, or stylized ways such as painting and drawing. This book focuses on image and video-based NPR where the input is

a 2D photograph or a video rather than a 3D model 2D NPR techniques have application in areas as diverse as consumer and professional digital photography and visual effects for TV and film production The book covers the full range of the state of the art of NPR with every chapter authored by internationally renowned experts in the field covering both classical and contemporary techniques It will enable both graduate students in computer graphics computer vision or image processing and professional developers alike to quickly become familiar with contemporary techniques enabling them to apply 2D NPR algorithms in their own projects     Computer Vision and Image Processing Linda G. Shapiro, Azriel Rosenfeld, 1992 This volume is a collection of 26 papers in the areas of computer vision and image processing These papers were originally written for publication in the CVGIP Journals and have not been previously published They cover a wide variety of vision related topics providing fresh insight into these complex areas     **Computer Vision - ECCV ...** ,1994     **Digital Image Processing and Computer Vision** Robert J.
