Marin-Sanguino, Julio Vera, Rui Alves, 2019-01-11 If biology in the 20th century was characterized by an explosion of new technologies and experimental methods that of the 21st has seen an equally exuberant proliferation of mathematical and computational methods that attempt to systematize and explain the abundance of available data As we live through the consolidation of a new paradigm where experimental data goes hand in hand with computational analysis we contemplate the challenge of fusing these two aspects of the new biology into a consistent theoretical framework Whether systems biology will survive as a field or be washed away by the tides of future fads will ultimately depend on its success to achieve this type of synthesis The famous quote attributed to Kurt Lewin comes to mind there is nothing more practical than a good theory This book presents a wide assortment of articles on systems biology in an attempt to capture the variety of current methods in systems biology and show how they can help to find answers to the challenges of modern biology Capitalizing on New Needs and New Opportunities National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, 2001-01-11 This report addresses a topic of recognized policy concern To capture the benefits of substantial U S investments in biomedical R D parallel investments in a wide range of seemingly unrelated disciplines are also required This report summarizes a major conference that reviewed our nation's R D support for biotechnology and information technologies The volume includes newly commissioned research and makes recommendations and findings concerning the important relationship between information technologies and biotechnology It emphasizes the fall off in R D investments needed to sustain the growth of the U S economy and to capitalize on the growing investment in biomedicine It also encourages greater support for inter disciplinary training to support new areas such as bioinformatics and urges more
