Ultrasonic Nondestructive Evaluation Systems Pietro Burrascano, Sergio Callegari, Augusto Montisci, Marco Ricci, Mario Versaci, 2014-12-04 This book deals with a number of fundamental issues related to the practical implementation of ultrasonic NDT techniques in an industrial environment The book discusses advanced academic research results and their application to industrial procedures The text covers the choice and generation of the signals energizing the system to probe position optimization from quality assessment evaluation to tomographic inversion With a focus to deepen a number of fundamental aspects involved in the specific objective of designing and developing an ultrasonic imaging system for nondestructive testing aimed to automatically classify the entire production of an industrial production line targeted to the field of precision mechanics The contents of this book is the result of the common effort of six University Research Groups that focused their research activities for two years on this specific objective working in direct conjunction with primary industrial firms in a research project funded by the Italian government as a Strategic Research Project Recent Advances and Applications in Acoustics A. I. Komkin, 2025-09-30 This volume focuses on the latest innovations in environmental acoustics by combining advanced theoretical modeling with practical engineering applications Topics include novel computational approaches innovative acoustic materials and cutting edge technologies such as resonator based systems ultrasonic methods and sustainable sound absorbing solutions By integrating interdisciplinary perspectives the book provides tools for solving urgent challenges in noise control infrastructure design and environmental sustainability With its applied orientation and unique scope the book fosters collaboration between academic researchers and industry practitioners It will be of interest to scholars engineers and professionals working in environmental acoustics noise control smart infrastructure and sustainable engineering systems *Proceedings of the 1st Conference of the European Association on Quality Control of Bridges and Structures* Carlo Pellegrino, Flora Faleschini, Mariano Angelo Zanini, José C. Heterogenous Computational Intelligence in Internet of Things Pawan Singh,Prateek Singhal,Pramod Kumar Mishra,Avimanyou K. Vatsa,2023-10-26 We have seen a sharp increase in the development of data transfer techniques in the networking industry over the past few years We can see that the photos are assisting clinicians in detecting infection in patients even in the current COVID 19 pandemic condition With the aid of ML AI medical imaging such as lung X rays for COVID 19 infection is crucial in the early detection of many diseases We also learned that in the COVID 19 scenario both wired and wireless networking are improved for data transfer but have network congestion An intriguing concept that has the ability to reduce spectrum congestion and continuously offer new network services is providing wireless network virtualization The degree of virtualization and resource sharing varies between the paradigms Each paradigm has both

technical and non technical issues that need to be handled before wireless virtualization becomes a common technology For wireless network virtualization to be successful these issues need careful design and evaluation Future wireless network architecture must adhere to a number of Quality of Service QoS requirements Virtualization has been extended to wireless networks as well as conventional ones By enabling multi tenancy and tailored services with a wider range of carrier frequencies it improves efficiency and utilization In the IoT environment wireless users are heterogeneous and the network state is dynamic making network control problems extremely difficult to solve as dimensionality and computational complexity keep rising quickly Deep Reinforcement Learning DRL has been developed by the use of Deep Neural Networks DNNs as a potential approach to solve high dimensional and continuous control issues effectively Deep Reinforcement Learning techniques provide great potential in IoT edge and SDN scenarios and are used in heterogeneous networks for IoT based management on the QoS required by each Software Defined Network SDN service While DRL has shown great potential to solve emerging problems in complex wireless network virtualization there are still domain specific challenges that require further study including the design of adequate DNN architectures with 5G network optimization issues resource discovery and allocation developing intelligent mechanisms that allow the automated and dynamic management of the virtual communications established in the SDNs which is considered as research perspective

Rock Mechanics M. Abbie,2009 Rock mechanics is the theoretical and applied science of the mechanical behaviour of rock and rock masses Rock mechanics as applied in mining petroleum and civil engineering practice is concerned with the application of the principles of engineering mechanics to the design of the rock structures This book examines the hydraulic characterisation of fractured rocks with specific reference to the fluid flow in single fractures the interpretation of hydraulic tests the geometrical characterisation and modelling of fracture networks An appropriate model for the fluid flow and transport in fractured formations is based on these items Indications are also given about the best strategy to undertake in order to set up this model This book develops the conditions criteria basic approaches and test case results for establishing the elastic compliance tensor hydraulic permeability tensor and numerical techniques for investigating stress effect on hydraulic behaviour of fractured rocks The correlation between the fracture aperture and size represented by trace length is also examined In addition the role of CO₂ saturated water on the fracturing behaviour of rock samples and the geomaterials geotechnical parameter changes after subjection to environmental solutions are examined Proceedings ,2009
