

Q.4 write a short note on system international (S.I)?

Ans. In 1960 an international conference was held near Parisian which it was decided to introduce such a system of units which could be used all over the world. so they introduced system international - S.I

This system is based on seven basic quantities which are given in table 1 of Q.3.

Q.5 what are prefixes? Why we use it?

Ans. **Prefixes:-** the multiples and submultiples of the power of 10 which are used with basic units, they have their own specific names and symbols and they are called prefixes like kilo (10^3), milli (10^{-3}) etc.

Need of prefixes:- some time we have to deal with quantities that are either very small or very large as compared to basic unit in such cases we need to use prefixes.

For example:- to measure the thickness of a paper we use smaller smaller unit like milli meter (mm) rather than meter (m). Similarly if we want to measure the distance b/w two big cities then we need greater unit like kilometer (km) rather than meter.

This under such conditions for convenience we express the table of prefixes as is given below.

Power	Prefix	Symble	Power	Prefix	Symble	Power	Prifixe	symble
10^{-15}	Atto	A	10^{-3}	Milli	M	10^6	Mega	Mm
10^{-15}	Femto	F	10^{-2}	Centi	C	10^9	Giga	G
10^{-12}	Pico	P	10^{-1}	Deci	D	10^{12}	Tera	T
10^{-9}	Nano	N	10^1	Deca	De	10^{15}	Peta	P
10^{-6}	micro	u	10^3	Kilo	k	10^{18}	exa	e

Q.6 what is scientific notation? How we convert a given number in scientific? Explain?

Ans. **Scientific notation:-** A very large number "N" expressed in the form of " $M \times 10^m$ " where "m" is a number whose 1st digit is non-zero and "n" is a +ve or -ve power of "10".

Conversion to scientific:- A number "N" can be expressed scientific by following method.

1. Write the number in standard form i.e. $N = 98,000$.
2. Put the decimal point after its non-zero digits i.e. $N = 9.8000$
3. Now multiply 10 with "M" or 9.8 i.e. 9.8×10

Cox, 2006 Physlet Quantum Physics contains a collection of over 200 ready to run interactive exercises These media focused critical thinking and problem solving exercises are based on carefully designed computer simulations generated in awardwinning Java applets Physlet Quantum Physics is based on current educational experimental and theoretical research and gives students an interactive visual representation of the often difficult to visualize physical phenomena in quantum physics *Raising the Alarm* Robert Andrew Este, 2013-06-13 As the foundation of our modern world innovation has generated a seemingly endless ocean of new products new processes new thoughts and new ways of doing things Every day we enhance our innovation and its effects and we advance accomplish and constantly seek even more Generally we tend to live well based on our innovation outputs This suggests that we think we know what we are doing and that we know where we are headed We do know what we re doing don t we Most would say yes we do indeed we are inclined to be certain of it But can we be certain about what we know about innovation To address this question we search for evidence of any useful outputs of the work of philosophy Such outputs should help us better understand if we can indeed be certain about what we do and where we are going Is there any evidence of this Alas philosophy is nowhere to be found As a tool of rigorous reflection and understanding even where some of the most exciting and forward looking innovation enterprise in science engineering and organizational structuring takes place philosophy seems to have vanished if it was ever there in the first place Today this seems somehow normal and quite all right But is it Of course we are aware that our history of philosophy illuminates the earlier pathways we once followed to achieve our modernity and that is fine but where is philosophy and its work today Where has philosophy gone In this book we explore these questions and more why is philosophy vanishing or even entirely absent from our world today What has happened If at one time philosophy was so very important why would it no longer be much in evidence if it is there at all Where is the work

of philosophy today as we push forward with innovation in our astonishing leading edge realms Do we really understand what we are doing Do we have any idea where we are going And most chillingly regardless of the answers does it matter The claim is made in this book that the disappearance of philosophy does matter and alarm bells ought to be ringing Why Because the work of philosophy work we seem to have forgotten is essential for us to know where we are going If we are truly serious about surviving and thriving especially by being so innovative in so many spectacular and challenging ways we cannot afford to have philosophy and its works disappear and then be forgotten Said plainly we cannot deny and then lose the maps and compass of philosophy applied to the challenges of today and tomorrow If we do we lose any reason for any journey anywhere And more broadly we are in danger of losing reason generally To continue denying philosophy and then in the end to deny that very denial is a move with no hope of benefit But the lack of evidence for the work of philosophy indicates that move is underway We are destroying any useful link between innovation and philosophy In so doing we are seriously reducing the value of innovation no matter how wonderful we think it might be while blindly forgetting the critical importance of philosophy and its work This move will guarantee that the path to our future will be fraught with unnecessary hardship and difficulty and then if it is permanent will deal a fatal blow If we truly wish to thrive and persevere we are compelled to avoid the fatal error of philosophical denial To do so we must rediscover revitalize and apply anew the rigorous work of philosophy to innovation in our modern era

Socratic Physics George Mathew,N. N. Mathew,1998-09-04 Written in language that students understand the authors present problems in this workbook that help students grasp a conceptual understanding of physics They start first with short manageable questions followed by longer ones Mathematical problem solving is emphasized but not the focus of the problems Rather than repeat what physics textbooks present this workbook uses problems to teach students the fundamentals of physics Each problem builds on the preceding successfully completed one so the students are motivated by their success The authors provide detailed solutions in the workbook for some problems for students to learn how to approach and ultimately to solve problems

Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy,Elizabeth S. Charles,James D. Slotta,Nathaniel Lasry,2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary

counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
