**Pedestrian Dynamics** Pushkin Kachroo,2018-10-03 Homeland security transportation and city planning depend upon well designed evacuation routes You can't wait until the day of to realize your plan won't work Designing successful evacuation plans requires an in depth understanding of models and control designs for the problems of traffic flow construction and road closures and the intangible human factors Pedestrian Dynamics Mathematical Theory and Evacuation Control clearly delineates the derivation of mathematical models for pedestrian dynamics and how to use them to design feedback controls for evacuations The book includes Mathematical models derived from basic principles Mathematical analysis of the model Details of past work MATLAB code 65 figures and 400 equations Unlike most works on traffic flow this book examines the development of optimal methods to effectively control and improve pedestrian traffic flow The work of a leading expert it examines the differential equations applied to conservation laws encountered in the study of pedestrian dynamics and evacuation control problem The author presents new pedestrian traffic models for multi directional flow in two dimensions He considers a range of control models in various simulations including relaxed models and those concerned with direction and magnitude velocity commands He also addresses questions of time cost and scalability The book clearly demonstrates what the future challenges are and provides the tools to meet them
