Comcast Youtube Slow:

Vision David S. Tatel, 2024-06-11 The moving thoughtful and inspiring memoir Bryan Stevenson author of *Just Mercy* by one of America's most accomplished public servants and legal thinkers who spent years denying and working around his blindness before finally embracing it as an essential part of his identity David Tatel has served nearly 30 years on America's second highest court the United States Court of Appeals for the D.C. Circuit where many of our most crucial cases are resolved or teed up for the Supreme Court He has championed equal justice for his entire adult life decided landmark environmental and voting cases and embodied the ideal of what a great judge should be Yet he has been blind for the past 50 of his 80 plus years Initially he depended upon aides to read texts to him and more recently a suite of hi tech solutions has allowed him to listen to reams of documents at high speeds At first he tried to hide his deteriorating vision and for years he denied that it had any impact on his career Only recently partly thanks to his first ever guide dog Vixen has he come to fully accept his blindness and the role it's played in his personal and professional lives His story of fighting for justice over many decades with and without eyesight is an inspiration to us all This memoir of a judge of the country's second highest court who has been without sight for decades goes down like a cool drink on a hot day Scott Turow 1 bestselling author of *Suspect* Deeply moving and packed with wisdom Frank Bruni *New York Times*

The New World of Transitioned Media Gali Einav, 2014-10-01 The media industry is undergoing an accelerated pace of change driven in large part by the proliferation of digital platforms In many cases the speed of adoption has exceeded our ability to process the impact of these changes on individuals and society at large This book provides a behind the scenes look at the media industry's transition into the digital era and examines its impact on marketing advertising innovation and other economic and social activities The impact of digital technologies on traditional media sectors such as advertising video games film and television is well documented Less

understood is its effect on our perceptions thought processes and inter personal relationships Social media for example represents a fundamental change in the ways we interact with media communicate with each other and even present ourselves to the world This has shaped the way we communicate with institutions and brands Similar to the first Transitioned Media book Transitioned Media A Turning Point into the Digital Realm this book combines media industry leaders and academics to explore various transformative trends and issues Themes include measuring cross platform behaviour artificial intelligence in journalism the evolution of video games digital media and physical space the mobile use trends social media and the corporate world the changes in the television and newspaper business and the evolving relationship between advertisers and target audiences The varied backgrounds of contributors and array of topics make for a unique and insightful point of view

Coordinating the Internet Fredrik Lindeberg, 2019-12-10 M nga sj lvklarheter i v rt digitala samh lle r beroende av Internet f r att fungera Allt fr n smarta d rrar f r hemtj nster till sj lvscanningsapparaterna p ICA till nyare bilar moderna tillverkningsrobotar telefoner och aff rssystem Den h r licentiatavhandlingen reder ut vad Internet r hur det styrs och vad det har f r praktiska konsekvenser Tidigare forskning finns bland annat inom telekommunikation d r Internet liknas vid andra telekommunikationstj nster s som kabel TV eller mobiltelefoni och inom digitalisering b de inom management och informationssystem d r Internet i det n rmaste tas f r givet som teknisk infrastruktur H r tar jag en ansatts d r jag f rklarar Internet ur ett kombinerat tekniskt och organisatoriskt perspektiv Studien r principiellt uppdelad i tre delar Den f rsta delen fokuserar p att begreppsm ssigt hitta ett s tt att diskutera Internet utan att essentiella aspekter faller bort s som styrningen eller konsekvenser av den tekniska designen Jag landar i att Internet r b de ett tekniskt och ett organisatoriskt fenomen Tekniskt i bem rkelsen att det handlar om digital paketbaserad kommunikation dvs att olika paket kan ta olika v g och att det inte finns ett beroende p en viss specifik v g eller krets vilket kan s rskiljas fr n exempelvis kretskopplad kommunikation dvs en specifik v g fr n s ndare till mottagare eller rent analog kommunikation I denna tekniska dimension r Internet f rh llandevis likt klassisk telekommunikation s som kabel TV och mobiltelefoni och f rltar sig p best effort paketbaserad kommunikation I den andra dimensionen styrning och organisation r Internet ett explicit bottom up fenomen som styrs med andra principer och ideal n klassisk telekommunikation Till sin utformning r denna minsta m jliga koordination som kr vs f r att m jligg ra koordinering av de tekniska unika identifierare som beh vs f r att Internet ska fungera dvs idag DNS och BGP florna av protokoll f r anv ndning av namn och nummer p Internet B da dimensionerna de organisatoriska och tekniska f ljer samma designprinciper och generellt r det meningsfullt att se Internet som en ekologi av akt rer snarare n en organisation i strikt teoretiska termer exempelvis finns ingen tydlig vergripande strategi organisationsnummer eller l neutbetalare Det r dessa designprinciper som ligger v l i linje med systemarkitektursprinciper f r datorsystem som r orsaken till Internets lager design d r man generellt inte ska bry som om vad som h nnder p andra lager n sitt eget beskrivet som separation of concerns eller i dubbel negation high cohesion i texten samt att ha en minimalistisk ansatts till koordinering

och enbart koordinera eller skapa beroenden mellan enheter både tekniskt och organisatoriskt när det verkligen behövs beskrivet som minimum coordination eller low coupling i texten. Den andra delen fokuserar på hur Internet kan socialt påverkas eller förändras till något annat eller till något med en annan funktion sett som en styrd organisation. Jag använder begreppet social robusthet som motpol till teknisk robusthet som i hur man tekniskt kan förstå Internet för att diskutera dessa aspekter. Slutsatserna här mynnar ut i att Internets explicita bottom up och problemsupplägnings design gör det märkbart svårt för någon att medvetet påverka Internet för att ändra dess beskaffenhet och dessutom visar jag att även om man praktiskt lyckas ta över de formellt beslutande är den exempelvis ICANNs och IETFs styrelser så finns det inga formella eller praktiska hinder för att bara ignorera dem dvs switching costs för just ICANN eller IETF är låga om man tekniskt omständligt med att konfigurera om rutter och routing tabeller och betydligt enklare än att gå från IPv4 till IPv6 då utrustning kan behövas ersättas och därmed en betydligt högre switching cost. Med andra ord det är enklare att byta ut Internets koordinerare än att byta ut Internet mot något som fungerar annorlunda. Den mer politiska världssituationen ett hot mot Internet eftersom den regelstyrda och koordinerade världssituationen inte längre är lika självklar som den varit tidigare. Den tredje och sista studien fokuserar på neutralitet dvs rätten till tverksoperatörer har att få gå vidare i andra dimensioner än trafikmängd som en praktiskt effekt av hur Internet styrs och fungerar. Det primära praktiska bidraget är att neutralitet inte förstås som enbart en reglerings och lagstiftningssak utan det är mer relevant att prata om i termer av neutralitet i praktiken. I den bemärkelsen är lagstiftningens vara eller inte vara mindre intressant än praktisk neutralitets vara eller inte vara och en tyngdpunktsförskjutning i den offentliga debatten hade varit diskussionen närmare hur Internet fungerar. Sammanfattningsvis ger Internets designprinciper att marknadskrafter och ej direkt reglering ska möjliggöra neutralitet. För att förtydliga tanken är att det ska finnas konkurrens inom de flesta nivåer eller lager och att det är av vikt att det finns konkurrens rakt igenom så att en kundvilja för paketneutralitet på tjänstenivå även påverkar nätgar och infrastrukturnivå så att det är användarnas efterfrågan som leder till neutralitet om den användarviljan finns. Dock kan det mycket väl vara så att man som användare inte är intresserad av neutralitet och då ska tjänsteleverantörer nätgar och infrastrukturoperatörer inte heller tvingas vara neutrala genom lagstiftning då det går att sticka i stäv med designprinciperna. Inte heller ska en grupp vilja kringa neutralitet påverka andras möjligheter att vilja. Genomgående identifierar jag två kolliderande världsbilder den distribuerade regelstyrda och koordinerade ordningen i sitt perspektiv med sina förhållanden och den mer integrerande och suveräna världssituationen med sitt perspektiv och sina förhållanden. Rent praktiskt uppfyller Internet en önskad funktion i den tidigare men ej i den senare designmässigt är byggt för att tillåta snarare än kontrollera och bestämma. Exempelvis finns det inte inbyggda tekniska mekanismer i Internet för att till exempel möjliggöra statlig vervakning eller kontroll av material som finns tillgängligt och där ligger det mer i statens intresse att ha kontrollerade telekommunikationstjänster såsom kabel TV mobiltelefoni och liknande lösningar där man inte helt enkelt kan lägga på ett extra lager för att uppnå kryptering anonymitet eller tillgång till andra tjänster. I texten använder

jag perspektiven tillsammans med teknologi marknader och byrkrati för att fånga upp dynamiken och strömningarna i Internet ekologin och jämföra med tekniska samhällsstruktureringar som exempelvis järnvägsnät postverk och finansiella marknader Jag konstaterar att Internet har varit styrt av teknologiskt baserade värderingar till skillnad från de andra exemplen som i huvudsak har utformats av dynamiken mellan byrkrati och marknad I denna mån förklarar jag att teknologi kan användas som strömning och motperspektiv till den klassiska uppställningen med byrkrati och marknad för att beskriva fenomenet digitaliseringens tidsfaser Avhandlingen sätter även på gäende trender i ett bredare perspektiv mot både organisation och teknik och trycker på vikten av att först delarna var för sig och tillsammans för att på ett rikare sätt måla upp helheten The modern society is to a large extent Internet dependent Today we rely on the Internet to handle communication for smart doors self scanning convenience stores connected cars production robots telephones and ERP systems The purpose of this thesis is to unbundle the Internet its technology its coordination and practical and theoretical consequences Earlier research has in telecommunications focused on the Internet as one of many potential telecommunications services such as cellphones or cable TV and the management and information systems field has by and large treated the Internet as black boxable infrastructure This thesis explains the Internet from the combined perspectives of technology and coordination This text contains three empirical studies The first is focused on conceptualizing and discussing the Internet in a meaningful way using both technology and coordination frameworks I unceremoniously conclude that the Internet is both a technological and a coordination phenomenon and neither of these aspects can be ignored The Internet is technological in that it concerns digital packet switched digital communication as opposed to circuit switched or purely analog communications The technological dimension of the Internet is similar in its constituency to classical telecommunications networks and has best effort mechanisms for packet delivery In the other dimension coordination the Internet is an explicit bottom up phenomenon minimally coordinated or governed by other ideals than classical telecommunications networks and systems At its core this least necessary coordination concerns technical unique identifiers necessary for inter network communication in practice today manifested as naming with the DNS protocol suite and numbering with the BGP protocol suite Both dimensions follow similar design characteristics the design of the technical Internet is similar to the design of the coordination of the Internet These design principles which are well aligned with software design principles is the cause of the Internet's layered design separation of concerns in practice and minimal view of coordination the least coordinated Internet In general terms it is fruitful to view the Internet and involved actors as an ecology rather than one organization or entity in need of governance or control The second study looks at the social resilience of the Internet That is it is possible through social means to change what the Internet is or can be viewed as I use social resilience as a counterpart to technical resilience i.e. resilience to technical interference In essence the bottom up and separations of concerns design of the coordination aspect of the Internet minimizes possible influence of actors' intent on mission disruption I also practically show that even a take over of the central

councils have little effect the constituency of the Internet since these councils are not invested with formal powers of enforcement This thesis suggests that the cost of switching from ICANN and IETF to another set of organizations is quite low due to the nature of the coordination of the Internet compared to for example switching all equipment to IPv6 capable equipment However the current political situation is a threat to the current Internet regime since an international and rule based world order is no longer on all states agendas The final empirical study focus on the practical and theoretical implications of the Internet on the case of net neutrality The primary contribution is that de facto and de jure net neutrality differ in practice and as such de facto net neutrality deserves more attention Also I suggest that any regulation either for or against net neutrality is problematic since such regulation would interfere with the inherent coordination mechanisms of the Internet As such regulation should focus on providing the necessary markets for Internet function given the coordination and design of the Internet As a net neutrality example net neutral Internet access options should exist as part of a natural service offering if wanted by customers not due to direct regulation Throughout the thesis I identify two colliding world orders both in terms of digital communication networks and terms of organizing society in general the rule based and coordinating order with its champions and the integrated or sovereign order with its champions In practical terms the Internet can be considered a want in the former the distributed perspective but not the later the integrative perspective since the Internet lacks inherent technical controls for surveillance and content control which are necessary in a world order where borders are important Regardless of if that importance stems from state oversight or intellectual property rights legislation I use these perspectives together with technology markets and bureaucracy to catch the dynamics of the Internet ecology I then compare these dynamics with other technological and societal phenomena such as railway networks postal services and financial markets And conclude that the Internet as conceptualized in this thesis can best be explained by technological values in opposite to the other examples which can best be explained by the dynamics of markets and bureaucracies without any real influence of the values of technology As such I suggest that the classical frame of markets and bureaucracy can fruitfully be expanded with technology to better explain the Internet and similar digitization phenomena This thesis puts current trends in a broader perspective based on technology and organization where the two perspectives together better can draw the full picture in a rich fashion
