

To Operate Stereo-Sonic Tape System—Turn the unit on by selecting a tape cartridge and inserting it—label side up and open end first—into the tape slot. Push cartridge into the tape slot until it is firmly seated.

The volume control knob is located on the left side of the tape slot. A ring-type tape control is located behind the volume control knob.

NOTE: During extremely cold weather, the unit may take a few minutes to warm up to operating temperature.

Channel Selection—Although the unit will play all four channels automatically and in order, a manual override is provided to allow channel selection at will. To change channels, push the volume knob in and release it. Each time the knob is pushed and released, the unit will step to the next channel, returning to the first channel when all channels have been selected.

Stereo Balance Control—is the ring-knob on the right of the tape slot. Turning the control clockwise reduces the volume of the left speakers and increases the volume of the right speakers, while turning the control counterclockwise does just the opposite.

Speaker Fader Control—The front-rear fader control is operated by the knob at the right end of the tape slot that balances the volume of the front and rear speakers.

CAUTION: The tape cartridge should always be disengaged approximately 1 inch when not playing. Protect the open end of the cartridge from damage and dirt.

LUGGAGE CARRIER

When luggage is being carried on the (optional) roof-mounted luggage carrier, it should, when practical, be carried as far forward as possible to help distribute the additional weight evenly.

CAUTION: The luggage carrier load should not exceed 200 pounds even though the load is evenly distributed over the maximum rack area. The load height should not exceed 15 inches above the side rails which are attached to the roof.
