**Aristotle's 'Parva naturalia'** Ronald Polansky, 2024-05-20 Aristotle's *Parva naturalia* continues the investigation begun in the *De anima*. The *De anima* defines the soul and treats its main powers: nutrition, sense, perception, intellect, and locomotion. The *Parva naturalia* consists of six treatises: On sense and sensible objects, On memory and recollection, On sleep, On dreams, On divination in sleep, On motion of animals, and *De motu animalium*. These treatises focus on the length and shortness of life, and on youth and old age, and respiration. They attend more to bodily involvement with the soul. While each work offers fascinating and challenging insights, there has never been as extensive a commentary covering them together. A reason is that the works have often been viewed as incidental and even inconsistent. The *De motu animalium* has not typically been included when viewed as an isolated work on animal locomotion. This commentary argues that the treatises considered together and with the *De motu* among them display a tight sequence, manifesting an artful yet easily overlooked design. We reveal many techniques of Aristotle's writing that have received little consideration previously. Our commentary contributes to a unified and comprehensive account of Aristotle's overall project regarding the soul and its connections with the body.

**Matter Transmission** Nicolás Salazar Sutil, 2018-05-17 Arguing for a paleocybernetic approach to current media studies debates. Nicolas Salazar Sutil develops an original framework for a new media ecology that embraces the primitive, the prehistoric, and the brute. Paying serious attention to materials used for cultural mediation that are unprocessed, unexplained, and raw, such as bones and limestones. Salazar Sutil posits that advanced industrialisation of new media technology has prompted countercultural movements that call for radical new ways of transmitting culture. For instance, through an experiential and high-tech appreciation of prehistoric landscape heritage. The future calls for a Palaeolithic awareness of living landscape as medium for the embodied transmission of cultural imaginaries and memories. The more media technology spurs mass forms of instantaneous media communication, the greater the need for primitive knowledge of earthling body and earthly landscape as our prime media for sustainable cultural transmission.

**Psychological Bulletin**, 1913 Vol 49 no 4 pt 2 July 1952 is the association's publication manual. **Understanding Imagination** Dennis L. Sepper, 2013-05-13 This book discusses that imagination is as important to thinking and reasoning as it is to making and acting. By reexamining our philosophical and psychological heritage, it traces a framework, a conceptual topology, that underlies the most disparate theories. A framework that presents imagination as founded in the placement of appearances. It shows how this framework was progressively developed by thinkers like Plato, Aristotle, Descartes, and Kant, and how it is reflected in more recent developments in theorists as different as Peirce, Saussure, Wittgenstein, Benjamin, and Bachelard. The conceptual topology of imagination incorporates logic, mathematics, and science, as well as production, play, and art. Recognizing this topology can move us past the confusions to a unifying view of imagination for the future.
