[Policy Guidelines for the Development and Promotion of Open Access](#)

Swan, Alma, UNESCO, 2012-04-10 UNESCO issued this publication to demystify the concept of open access (OA) and to provide concrete steps on putting relevant policies in place. Its focus is on scientific research from peer-reviewed journal articles. Building capacities in Member States for Open Access is a necessary but not sufficient condition for promotion of the concept. Creating an enabling policy environment for OA is therefore a priority. This publication will serve the needs of OA policy development at the government, institutional and funding agency level. The overall objective of the Policy Guidelines is to promote Open Access in Member States by facilitating understanding of all relevant issues related to Open Access. The guidelines are not prescriptive in nature but are suggestive to facilitate knowledge-based decision making to adopt OA policies and strengthen national research systems.

[Davidson's Principles and Practice of Medicine E-Book](#) Brian R. Walker, Nicki R. Colledge, 2013-12-06 More than two million medical students, doctors and other health professionals from around the globe have owned a copy of *Davidson's Principles and Practice of Medicine* since it was first published. Today's readers rely on this beautifully illustrated text to provide up-to-date detail of contemporary medical practice presented in a style that is concise and yet easy to read. *Davidson's* provides the factual knowledge required to practise medicine, explaining it in the context of underlying principles, basic science and research evidence, and shows how to apply this knowledge to the management of patients who present with problems rather than specific diseases. The book has won numerous prizes, including being highly commended in the British Medical Association book awards. *Davidson's* global perspective is enhanced

by the input of an international team of authors and a distinguished International Advisory Board from 17 countries Building on the foundations laid down by its original editor Davidson's remains one of the world's leading and most respected textbooks of medicine. The underlying principles of medicine are described concisely in the first part of the book and the detailed practice of medicine within each sub specialty is described in later system based chapters. Most chapters begin with a two page overview of the important elements of the clinical examination including a manikin to illustrate the key steps in the examination of the relevant system. A practical problem based clinical approach is described in the Presenting Problems sections to complement the detailed descriptions of each disease. The text is extensively illustrated with over 1000 diagrams, clinical photographs and radiology and pathology images. 1350 text boxes present information in a way suitable for revision including 150 clinical evidence boxes summarising the results of systematic reviews and randomised controlled trials and 65 In Old Age boxes highlighting important aspects of medical practice in the older population. A combined index and glossary of medical acronyms contains over 10 000 subject entries. The contents can also be searched comprehensively as part of the online access to the whole book on the StudentConsult platform. Access over 500 self testing questions with answers linked to the book's content for further reading. The text uses both SI and non SI units to make it suitable for readers throughout the globe. A new chapter specifically on Stroke Disease recognises the emergence of Stroke Medicine as a distinct clinical and academic discipline. A rationalisation of the 1350 boxes used throughout the book gives a simpler and clearer presentation of the various categories. New In Adolescence boxes recognise the fact that many chronic disorders begin in childhood and become the responsibility of physicians practising adult medicine. These boxes acknowledge the overlap transitional phase and highlight the key points of importance when looking after young people. The regular introduction of new authors and editors maintains the freshness of each new edition. On this occasion Dr Ian Penman has joined the editorial team and 18 new authors bring new experience and ideas to the content and presentation of the textbook. An expanded International Advisory Board of 38 members includes new members from several different countries.
