Our Posthuman Future Francis Fukuyama, 2017-06-15 Is a baby whose personality has been chosen from a gene supermarket still a human If we choose what we create what happens to morality Is this the end of human nature The dramatic advances in DNA technology over the last few years are the stuff of science fiction It is now not only possible to clone human beings it is happening For the first time since the creation of the earth four billion years ago or the emergence of mankind 10 million years ago people will be able to choose their children's sex height colour personality traits and intelligence It will even be possible to create superhumans by mixing human genes with those of other animals for extra strength or longevity But is this desirable What are the moral and political consequences Will it mean anything to talk about human nature any more Is this the end of human beings Our Posthuman Future is a passionate analysis of the greatest political and moral problem ever to face the human race

The Future of Bioethics Akira Akabayashi, 2014-01-09 Akira Akabayashi presents the first book to explore the conversation on bioethics that is taking place between scholars and practitioners from the East and West the first book in the discipline of bioethics for the globalized world of the future An international team of experts address emerging issues in bioethics focus on new developments and their potential for change and set the agenda for the future Most studies in bioethics advocating East West dialogue have either attempted cross cultural comparisons or have proposed Eastern philosophical paradigms to counter Western ideas The tacit premise of previous work on the East West dialogue is therefore a strain of relativism Simply maintaining a respectful distance from other cultures is no longer sufficient in this era of globalization The time has come for active engagement among different cultural perspectives The Future of Bioethics initiates discussion on bioethical issues that arise from new medical technologies such as regenerative medicine enhancement research ethics and synthetic biology and goes on to address challenging dilemmas that result from the globalization of social change such as transplantation tourism public health ethics care in the aging society and professionalism The volume presents original work by leading researchers in the field alongside that of promising new scholars as such it establishes not only a cross cultural dialogue but dialogue between researchers of different generations The book is divided into two parts the first on the progress of biomedical technologies and ethics and the second on globalization and bioethics Each part contains four sections on different topics which feature a lead essay followed by a set of commentaries and further discussion

The Future is Now Eric Cohen, William Kristol, 2002 This book looks at both the past and the future of the debate over whether there are moral limits to scientific progress and what life will look like in the genetic age

Current Controversies in the Biological Sciences Karen Faye Greif, Jon Frederick Merz, 2007 In recent years advances in biological science and technology have outpaced policymakers attempts to

deal with them Current Controversies in the Biological Sciences examines the ways in which the federal government uses scientific information in reaching policy decisions providing case studies of the interactions between science and government on different biomedical biological and environmental issues These case studies document a broad range of complex issues in science policy from the Human Genome Project to tobacco regulation and provide an accessible overview of both the science behind the issues and the policy making process The cases illustrate the different ways in which science and politics intersect in policy decisions as well as the different forms policy itself may take including not only regulatory action but the lack of regulation Among the topics examined are public and private research funding as seen in gene patenting reluctance to regulate even when a product has been proven unhealthy as in the case of tobacco a comparison of U S and international policy responses to genetically modified organisms and the competing interests at play in air pollution policy Each chapter includes shorter side essays on related topics for example essays on issues raised by the SARS epidemic accompany the detailed case study of the public health response to the anthrax laced mail received in the weeks after 9 11 This clear and readable introduction to controversial issues in the biological sciences will be a valuable resource for students of science policy and bioethics and for professionals in industry government and nongovernmental organizations who need background on emerging issues in the biological sciences
