Master s Thesis from the year 2011 in the subject Engineering Industrial Engineering and Management grade 1 Vienna University of Technology course Business Engineering and Computer Science language English abstract Climate change and the impact it has on our lives have forced many governmental and also non governmental organizations to conceive of new rules regulations and standards to control CO2 and greenhouse gas GHG emissions Calculating the energy efficiency and reducing the electricity consumption in data centers are important steps towards greening the IT in organizations Several studies have shown that by migrating into the cloud companies in most cases could reduce their costs in addition to decreasing their greenhouse gas emissions Unfortunately lack of guidelines and varying and limited services from different cloud providers have made the adoption of appropriate Cloud services a challenge for many organizations In this regard there is a vital need to study and analyze available services from different cloud vendors and provide enterprises with the best solutions available regarding their specific business requirements This thesis focuses on cloud computing and its efficiency for individual organizations It attempts to study the potential benefits of cloud computing by taking the environmental and energy consumption advantages into consideration Cloud Computing is not a new concept and has been a hype term in recent years Cloud computing is based on the available technologies and it is all about using a new term for the existing technologies But the question is why to create a new name for what already exists The answer to this question is closely related to the potential that Cloud computing has for organizations It is all about conversion of capital expenditure

CAPEX to the operational expenditure OPEX and the possible advantages that this conversion could have for any organization that chooses to migrate into the Cloud. In the following upon introducing the cloud computing concept and its related technologies business functions and processes information systems available for enterprises are explored. Later based on the required business processes and functions of organizations a comprehensive market analysis is carried out. For this purpose different cloud providers and their available services are analyzed. I developed an ontology for cloud computing based on the market analysis. This thesis is an attempt to make the process of mapping business processes functions to cloud services easier by providing organizations with a matrix of cloud services business processes distribution of market and an ontology for cloud computing. *Smart Governance with Cloud Computing* Ajit Singh, 2019-05-29 Research Paper postgraduate from the year 2019 in the subject Computer Sciences Internet of Things IOT grade 9 11 course Computer Science language English abstract A typical comprehension of cloud computing is constantly advancing and the phrasing and Cloud computing was begat for what happens when services and applications are moved into the internet that is cloud. Cloud processing is not something that abruptly seemed overnight in some structure it may follow back to a period when computer system frameworks remotely time shared registering assets and applications. All the more presently however cloud computing alludes to the a wide range of sorts of applications and services being conveyed in the cloud and the way that much of the time the devices used to get to these services don't require any unique applications. With the help of cloud computing you can utilize programming conveyed through the Internet on the program with no installation have an application on the Internet set up your own storage of remote file and database framework and that's just the beginning.

essentials that will never leave your side Workforce shortage in a digital era. Can 100% remote work attract more qualified candidates? Huong Hoang Thien, 2023-05-25 Master's Thesis from the year 2023 in the subject Leadership and Human Resources Recruiting grade 10 language English abstract What will happen if there aren't enough talents to fill the market in the future due to the demographical change This study focuses on the potential of offering 100% remote work to counteract the workforce shortage in Germany An empirical study has been conducted as an online survey to gain an overview of Germany's 100% remote job market In a fast changing world digital transformation has become an inevitable process for companies to adapt to new technologies and market trends The digital transformation in Germany has been significantly impacted by the COVID 19 pandemic positively and negatively On the one hand the pandemic forced German companies to embrace new technology more quickly and adapt to remote work However on the other hand it pointed out Germany's weaknesses in digital infrastructures and cybersecurity Additionally many German companies face a shortage of workers due to digital transformation Another reason that causes workforce shortage is demographical change Companies cannot operate their business correctly increase revenue or drive innovations to survive in a competitive market without suitable candidates Furthermore the digital revolution shaped the current digital generations as potential workers exhibit different digital behaviors and preferences Therefore companies must know them and their work preferences to fill the workforce shortage gap Remote working as a sub trend of the mega trend New Work has become the new standard for workers especially since the pandemic However there aren't any specific regulations regarding remote work in Germany yet In general remote work provides workers e.g. more freedom and a better work life balance Nevertheless remote work also has the downside such as workers experiencing isolation and loneliness due to the lack of social contact with co workers less productivity outside of the office etc For companies offering remote work gives them complete access to the talent pools including freelancers as external workers reducing costs due to fewer offices being more attractive to job seekers But on the other side remote leadership has become a big challenge for leaders Furthermore companies have to deal more with cyber security When everything's going remotely companies have become an easier target of cyber attacks
