Marston,2000 Annotation Newnes Passive and Discrete Circuits Pocket Book is aimed at all engineers technicians students and experimenters who can build a design directly from a circuit diagram In a highly concise form Ray Marston presents a huge compendium of circuits that can be built as they appear adapted or used as building blocks The devices used have been carefully chosen for their ease of availability and reasonable price The selection

of devices has been thoroughly updated for the second edition which has also been expanded to cover the latest ICs. The three sections of the book cover Modern passive components relays meters motors sensors and transducers Design of attenuators filters and bridge circuits Discrete semiconductor devices JFET MOSFET CMOS VMOS UJT SCR TRIAC and various optoelectronic devices. The subjects are treated in an easy to read highly practical manner with a minimum of mathematics. Ray Marston has proved through hundreds of circuits articles and books that he is one of the world's leading circuit designers and writers. He has written extensively for Electronics World, Nuts and Bolts, Electronics and Beyond, Popular Electronics, Electronics Now, Electronics Today, International and Electronics Australia amongst others. **VLSI**

**Custom Microelectronics** Stanley L. Hurst, 1998-11-05 Focuses on the design and production of integrated circuits specifically designed for a particular application from original equipment manufacturers. The book outlines silicon and GaAs semiconductor fabrication techniques and circuit configurations compares custom design style discusses computer aided design tools and more.

**Audio IC Users Handbook** R M MARSTON, 1997-08-14 A vast range of audio and audio associated ICs are readily available for use by design engineers and technicians. This handbook is a comprehensive guide to the most popular and useful of these devices including about 370 circuits with diagrams. It deals with ICs such as low frequency linear amplifiers, dual pre amplifiers, audio power amplifiers, charge coupled device, delay lines, bar graph display drivers and power supply regulators. It shows how to use these devices in circuits ranging from simple signal conditioners and filters to complex graphic equalisers, stereo amplifier systems and echo reverberation delay line systems. Not only does this Handbook contain a huge collection of circuits using state of the art and readily available ICs but also it gives a thorough grounding in theoretical information relating to the various aspects of modern audio systems and to various dedicated types of audio ICs. Newnes Circuits Manuals and User's Handbooks by Ray Marston cover a wide range of electronics subjects in an easy to read and non mathematical manner presenting the reader with many practical applications and circuits. They are specifically written for the practising design engineer, technician and the experimenter as well as the electronics students and amateur. The ICs and other devices used in the practical circuits are modestly priced and readily available types with universally recognised type numbers. Ray Marston has proved through hundreds of circuits articles and books that he is one of the leading circuit designers and writers in the world. He has written extensively for Popular Electronics, Electronics Now, Electronics and Beyond, Electronics World, Electronics Today, International and Electronics Australia amongst others.
