Dam Breach Modeling Technology Water Science And Technology Library:

Dam Breach Modeling Technology Vijay Singh, 1996-02-29 Dams are constructed for economic development and their construction involves large investments of money and natural and human resources. Of the various types of dams constructed around the globe, earth dams are the most common type and constitute the vast majority of dams. When a dam fails, it culminates in the sudden release of artificially stored water, which in turn becomes a potential menace to virtually everything downstream. The dam failure may result in loss of life and property. In recent years, instances of dam failure in the world have been too many and the resulting loss too high. As a result, dam safety programs have been developed in most countries of the world since the beginning of the nineteenth century. Earth dams are more susceptible to failure than other types. The cause of failure is often either overtopping or piping. The modeling of dam breaching due to either or both of these causes is of fundamental importance to development of dam safety programs. This book is therefore an attempt to present some aspects of earth dam breach modeling technology. It is hoped that others will be stimulated to write more comprehensive texts on this subject of growing interest and importance. The book is divided into eight chapters. The first chapter is introductory and discusses some aspects of dams and dam failures in the world.

These include a wide range of the new methods that are used in hydro modeling, such as Atmospheric Teleconnection Pattern, CONUS Scale Hydrologic Modeling, Copula Function Decision Support System, Downscaling Methods, Dynamic System Modeling, Economic Impacts and Models, Geostatistics and Geospatial Frameworks, Hydrologic Similarity Indices, Hydropower Renewable Energy Models, Sediment Transport Dynamics, Advanced Models, Social Data Mining, and Wavelet Transforms. This volume is an example of true interdisciplinary work. The audience includes postgraduates and those interested in Water Science, Geotechnical Engineering, Soil Science, Civil Engineering, Chemical Engineering, Computer Engineering, Engineering Applied Science, Earth and Geoscience, Atmospheric Science, Geography, Environment Science, Natural Resources, Mathematical Science, and Social Sciences. It is a fully comprehensive handbook which provides all the information needed related to the best practices for managing water data. Contributions from global experts in the fields of data management, research, climate change, and resilience insufficient data problem, etc. Thorough applied examples and case studies in each chapter providing the reader with real world scenarios for comparison. Includes a wide range of new methods that are used in hydro modeling with step by step guides on how to use them.

Monitoring, Simulation, Prevention and Remediation of Dense Debris Flows II D. De Wraechien, Mario Aristide Lenzi, C. A. Brebbia, 2008 This book contains papers presented at Second International Conference on Debris Flow, including all aspects of Debris Flow Monitoring, Modelling, Hazard Assessment, Mitigation Measures, Case Studies, and Extreme Events, Erosion, Slope Instability, and Sediment Transport, held in

the New Forest UK in 2008 and organised by the Wessex Institute of Technology with the co sponsorship of EurAgEng European Society of Agricultural Engineers and CIGR International Commission of Agricultural Engineering Due to the increased frequency with which debris and hyper concentrated flows occur and the impact they have on both the environment and human life in recent years these extreme events and related processes have attracted increasing attention from research groups land planning and management professionals The objective of the Meeting was to provide a forum for engineers scientists and managers from laboratories industry government and academia to interchange knowledge and expertise in the field of dense and hyper concentrated flows A full understanding of these phenomena leads to a new integrated risk management approach which provides measures for preventing a hazard turning into a natural disaster

Hilbert-Huang Transform Analysis of Hydrological and Environmental Time Series A.R. Rao,E.-C. Hsu,2008-01-08 The Hilbert Huang Transform HHT is a recently developed technique used to analyze nonstationary data This book uses methods based on the Hilbert Huang Transform to analyze hydrological and environmental time series These results are compared to the results from the traditional methods such as those based on Fourier transform and other classical statistical tests

The Ganges Water Diversion M. Monirul Qader Mirza,2004 This book presents multi disciplinary analyses of the environmental effects and implications in Bangladesh and India of the Ganges water diversion The analyses demonstrate that the downstream part of the Ganges River basin in Bangladesh which has a sensitive ecosystem has become very vulnerable to water diversion and as a result it has caused significant damage to many economic sectors and ecosystems Areas upstream of the Farakka Barrage in India have become more vulnerable to floods and riverbank erosion The Kolkata Port has marginally benefited from the water diversion In the Hooghly River estuary populations of flora and fauna have thrived In the downstream areas of Bangladesh costly adaptation measures have been adopted and in many cases damages are irreparable A regional cooperative framework is presented to foster water resources and environmental development in the Ganges River basin

Managing Urban Water Supply D.E. Agthe,R.B. Billings,N. Buras,2013-06-29 We the editors have long believed that a strong knowledge of relatively simple economic and engineering concepts is valuable in solving water management problems The lack of such knowledge has been apparent to us in some of the journal articles research proposals and books we have reviewed The articles which have been written concerning specific local water economies and management issues are scattered over a wide variety of journals making them hard to access Most of the extensive water resources literature is concerned with large regional water projects or with narrow technical and regional issues This book was written to make practical economic and engineering concepts readily available to urban water supply managers thereby filling a gap in the available literature It is concerned with decisions made daily monthly or annually by managers of urban water supply systems The book includes basic chapters presenting supply and cost concepts calculation of demand elasticities use of marketing concepts public goods analysis water markets industrial water demand and the use of price in water conservation

The authors have included multiple examples of how these concepts can aid in managing urban water supply. The water provider is generally a governmental entity or regulated private utility. Most books on public utilities and their management emphasize gas, electricity or telephone rather than water. Water is different because of many variations in quality by source and the necessity for proper disposal of waste water.

Methods and Tools for Drought Analysis and Management Giuseppe Rossi, Teodoro Vega, Brunella Bonaccorso, 2007-07-26. Implementation of effective drought management policies requires both advanced technologies and appropriate methods. Monitoring and forecasting systems, practical tools for risk assessment as well as simple and objective criteria to select and implement appropriate drought mitigation measures are key elements for a successful drought management strategy. These key issues have been tackled by universities and public agencies involved in the EU projects Sedimed and Sedimed II, Programme Interreg IIIB MEDOCC aimed at the definition of an integrated network for real time monitoring of drought, the development of common methodologies for drought analysis and forecasting as well as the definition of proper mitigation strategies for the Mediterranean countries. The book presents the main outcomes of such projects with a special focus on drought monitoring and forecasting techniques at different spatial scales, new or modified agrometeorological indices and remote sensing technique for drought identification and characterization, tools to improve surface water resources management under drought conditions, methods and tools for groundwater resources monitoring and management based on hydrogeological and hydrodynamics characteristics of aquifers, general criteria to select and implement mitigation strategies to prevent or minimize drought impacts.

Water-Rock Interaction Ingrid Stober, Kurt Bucher, 2002. The chemical interaction of water and rock is one of the most fascinating and multifaceted process in geology. The composition of surface water and groundwater is largely controlled by the reaction of water with rocks and minerals. At elevated temperature, hydrothermal features, hydrothermal ore deposits and geothermal fields are associated with chemical effects of water-rock interaction. Surface outcrops of rocks from deeper levels in the crust, including exposures of lower crustal and mantle rocks, often display structures that formed by interaction of the rocks with a supercritical aqueous fluid at very high pT conditions. Understanding water-rock interaction is also of great importance to applied geology and geochemistry, particularly in areas such as geothermal energy, nuclear waste repositories and applied hydrogeology. The extremely wide ranging research efforts on the universal water-rock interaction process is reflected in the wide diversity of themes presented at the regular International Symposia on Water-Rock Interaction (WRI). Because of the large and widespread interest in water-rock interaction, the European Union of Geosciences organized a special symposium on water-rock interaction at EUGIO, the biannual meeting in Strasbourg 1999, convened by the editors of this volume. In contrast to the regular WRI symposia addressed to the specialists, the EUGIO water-rock interaction symposium brought the subject to a general platform. This very successful symposium showed the way to the future of water-rock reaction research.

Regionalization of Watersheds A.R. Rao, V. V. Srinivas, 2008-04-18. Design of water control structures, reservoir

management economic evaluation of flood protection projects land use planning and management flood insurance assessment and other projects rely on knowledge of magnitude and frequency of floods Often estimation of floods is not easy because of lack of flood records at the target sites Regional flood frequency analysis RFFA alleviates this problem by utilizing flood records pooled from other watersheds which are similar to the watershed of the target site in flood characteristics Clustering techniques are used to identify groups of watersheds which have similar flood characteristics This book is a comprehensive reference on how to use these techniques for RFFA and is the first of its kind It provides a detailed account of several recently developed clustering techniques including those based on fuzzy set theory and artificial neural networks It also documents research findings on application of clustering techniques to RFFA that remain scattered in various hydrology and water resources journals The optimal number of groups defined in an area is based on cluster validation measures and L moment based homogeneity tests These form the bases to check the regions for homogeneity The subjectivity involved and the effort needed to identify homogeneous groups of watersheds with conventional approaches are greatly reduced by using efficient clustering techniques discussed in this book Furthermore better flood estimates with smaller confidence intervals are obtained by analysis of data from homogeneous watersheds Consequently the problem of over or under designing by using these flood estimates is reduced This leads to optimal economic design of structures The advantages of better regionalization of watersheds and their utility are entering into hydrologic practice Audience This book will be of interest to researchers in stochastic hydrology practitioners in hydrology and graduate students
