Bioanalytics Friedrich Lottspeich, Joachim W. Engels, 2018-03-08 Analytical methods are the essential enabling tools of the modern biosciences. This book presents a comprehensive introduction into these analytical methods including their physical and chemical backgrounds as well as a discussion of the strengths and weakness of each method. It covers all major techniques for the determination and experimental analysis of biological macromolecules including proteins, carbohydrates, lipids and nucleic acids. The presentation includes frequent cross references in order to highlight the many connections between different techniques. The book provides a bird's eye view of the entire subject and enables the reader to select the most appropriate method for any given bioanalytical challenge. This makes the book a handy resource for students and researchers in setting up and evaluating experimental research. The depth of the analysis and the comprehensive nature of the coverage mean that there is also a great deal of new material even for experienced experimentalists. The following techniques are covered in detail: Purification and determination of proteins, Measuring enzymatic activity, Microcalorimetry, Immunoassays, affinity chromatography and other immunological methods, Cross linking, cleavage and chemical modification of proteins, Light microscopy, electron microscopy and atomic force microscopy, Chromatographic and electrophoretic techniques, Protein sequence and composition analysis, Mass spectrometry methods, Measuring protein-protein interactions, Biosensors, NMR and EPR of biomolecules, Electron microscopy and X-ray structure analysis, Carbohydrate and lipid analysis, Analysis of posttranslational modifications, Isolation and determination of nucleic acids, DNA hybridization techniques, Polymerase chain reaction techniques, Protein sequence and composition analysis, DNA sequence and epigenetic modification analysis, Analysis of protein-nucleic acid interactions, Analysis of sequence data, Proteomics, metabolomics, peptidomics and toponomics, Chemical biology.

Organic Trace Analysis Reinhard Nießner, Andreas Schäffer, 2024-09-23 Organic contaminants even in very low concentrations can have toxic and ecotoxic effects on exposed organisms. Detection and quantification of such trace amounts in diverging matrices e.g. water, air, soil, food, tissue, organisms is challenging and great carefulness and strategic thinking is needed to get reliable results along the way from taking samples up to the final analysis. In the 2nd edition besides revisions of existing chapters new analytical technologies and recent application examples are presented: non-target mass spectrometric analysis, trace analysis of per- and polyfluoroalkylated forever chemicals, organophosphorus esters, nerve agents and micro- and nanoplastic particles in the environment. Students will learn about peculiarities and state-of-the-art organic trace analysis and acquire basic and advanced principles of statistical evaluation of analytical results, quality control strategies and good laboratory practices, sampling techniques from various matrices, sample treatment, enrichment and clean up techniques, chromatographic analyses including hyphenated techniques and spectroscopy, as well as mass spectrometry and bioanalytical tools. An extended chapter on selected applications will transfer the theoretical understanding into applied scientific problems. Students will profit from a comprehensive and state-of-the-art overview of organic trace analyses and from an extensive collection of relevant literature.
