Comcast Quit Service:

The Economics of Telecommunication Services Pramode Verma, Fan Zhang, 2020-09-25 This textbook characterizes the economics of telecommunication services from an engineering perspective. The authors bring out the fundamental drivers of the industry and characterize networks from a graph theoretic perspective including random small world and scale free networks. The authors relate the topology of a telecommunication network using circuit and packet switched architectures to throughput and other performance parameters. The pricing model proposed in this book is based on the cost of displaced opportunity as opposed to the cost of the elements of the network engaged in delivering a service. The displaced opportunity is characterized by the revenue associated with the service that the network could have alternatively delivered most efficiently using an identical level of resources. The book addresses other topics such as regulation in legacy networks and net neutrality. Finally, the book introduces the application of game theory in a multi vendor multi services competitive marketplace. The book aims to bridge the gap between the science of economics as practiced by economists and practice of pricing from a telecommunication engineer's perspective. This book is suitable for use by senior undergraduate or graduate students of telecommunication engineering or researchers and practitioners in telecommunication engineering.

Regulation and the Performance of Communication and Information Networks Gerald R. Faulhaber, Gary Madden, Jeffrey Petchey, 2012-01-01 Due to their economic characteristics and also to their consequences on many aspects of collective life, information networks have always been at the edge of regulatory innovations and at the center of policy debates. The contributors of this volume combine long term visions of the factors determining regulatory policies with up to date analyses of technicalities to be dealt with to provide the reader with an extended understanding of the issues and constraints shaping the future of digital networks. Eric Brousseau, Universit Paris Dauphine, France and the European University Institute, Italy. Digital markets worldwide are in rapid flux. The Internet and World Wide Web have traditionally evolved in a largely deregulated environment but recently governments have shown great interest in this rapidly developing sector and are imposing regulations for a variety of reasons that are changing the shape of these industries. This book explores why the industrial organization of broadband ISPs, Internet backbone providers and content application providers are in such turmoil. The expert contributors straddle the turbulent past of the telecoms sector and also contribute to its exciting though unpredictable future via positive analysis of past communications policies which is then utilized to deduce lessons to guide future policy making decisions. It is illustrated that broadband ISPs no longer simply provide a conduit for service delivery; they are also involved in producing content and transaction services themselves in competition with content and delivery providers. The blurring of the traditional lines between these three sectors as each enters into the others' markets is highlighted. The conclusion is that we are witnessing the emergence of powerful competing platforms linked in complex ways that challenge traditional economic analyses. Exploring governance issues, regulation and investment next.
