Carl Sagan A Life In The Cosmos:

Carl Sagan William Poundstone,2000-10-01 In this compelling life of Carl Sagan award winning science writer William Poundstone details the transformation of a bookish young astronomer obsessed with life on other worlds into science's first authentic media superstar The instantly recognizable Sagan a fixture on television and a bestselling author offered the layperson entry into the mysteries of the cosmos and of science in general To much of the scientific community however he was a pariah a brazen publicity seeker who cared more about his image and his fortune than the advancement of science Poundstone reveals the seldom discussed aspects of Sagan's life the legitimate and important work of his early scientific career the almost obsessive capacity to take on endless projects and the multiple marriages and fractured personal life in what The New Yorker called an evenhanded guide to a great man's career

Civilized Life in the Universe George Basalla,2006-01-19 From Aristotle to Stephen Hawking some of the most prominent Western scientists have had definite perceptions and misperceptions about the existence of civilized life on other planets Johannes Kepler who transformed astronomy with his work on the shape of planetary orbits was quite sure that engineers on the Moon excavated circular pits to provide shelter for lunar inhabitants Christian Huygens the most prominent scientist between Galileo and Newton criticized Kepler's speculations but used probability theory to prove that planetarians on other worlds were much like humans and practiced the science of astronomy Carl Sagan indicted Huygens as a biological chauvinist but failed to see that he was a cultural chauvinist when he assumed that alien life would have a technology similar to ours though far more

advanced This book traces the influence of one speculation on the next showing an unbroken but twisting chain of ideas as it passes from ancient to modern times and from science to culture and back again Throughout the author interweaves his own view that scientific belief in and search for extraterrestrial civilizations is an impulse that is part anthropomorphic and part secularized religious
