Large Carnivore Conservation David J. Mattson, Rebecca Watters, Avery C. Anderson, Susan G. Clark, Douglas Clark, Linaya Workman, D. Scott Slocum, William M. Pym, Micheal L. Gibeau, Seth M. Wilson, Gregory A. Neudecker, James J. Jonkel, J. Daniel Oppenheimer, Lauren Richie, David N. Cherney, Christina Milloy, 2014-05-27 Strategies for protecting wolves mountain lions and more by taking the human species into account as well Very valuable Journal of Wildlife Management Drawing on six case studies of wolf grizzly bear and mountain lion conservation in habitats stretching from the Yukon to Arizona Large Carnivore Conservation argues that conserving and coexisting with large carnivores is as much a problem of people and governance of reconciling diverse and sometimes conflicting values perspectives and organizations and of effective decision making in the public sphere as it is a problem of animal ecology and behavior By adopting an integrative approach editors Susan G Clark and Murray B Rutherford seek to examine and understand the interrelated development of conservation science law and policy as well as how these forces play out in courts other public institutions and the field In combining real world examples with discussions of conservation and policy theory Large Carnivore Conservation not only explains how traditional management approaches have failed to meet the needs of all parties but also highlights examples of innovative successful strategies and provides practical recommendations for improving future conservation efforts Building on decades of work this book integrates biological knowledge with human dimensions study and charts a course for coexistence with large carnivores Douglas W Smith Senior Wildlife Biologist Yellowstone National Park **Carnivore Conservation** John L. Gittleman, 2001-06-28 Carnivores are the focus of intense attention and resources in conservation biology It is often argued that because carnivores are at the top of the food chain if they are protected then other taxa will also be afforded adequate protection Carnivores are also charismatic and compete with humans for dwindling space and environmental resources In the past 10 years theoretical and empirical studies on carnivores have developed very quickly This volume reviews and summarises the current state of the field describes limitations and opportunities for carnivore conservation and offers a conceptual framework for future research and applied management As such it will be of interest to students and researchers of conservation biology mammalogy animal behaviour ecology and evolution **Carnivore Ecology and Conservation** Luigi Boitani, Roger A. Powell, 2012-01-12 Animals that must hunt and kill for at least part of their living are inherently interesting to many people and the role that carnivores play in biological communities attract interest from ecologists and conservation biologists Conflicts with human activities stimulate continual debates about the management of carnivore populations and throughout the world people seek workable solutions for human carnivore coexistence This concise yet authoritative handbook describes research methods and techniques for the study and conservation of all terrestrial carnivore species Particular attention is paid to techniques for managing the human carnivore interface Descriptions of the latest methodologies are supported by references to case studies whilst dedicated boxes are

used to illustrate how a technique is applied to a specific land cover type species or particular socio economic context The book describes the most recent advances in modelling the patterns of animal distributions movements and use of land cover types as well as including the most efficient methods to trap handle and mark carnivores Carnivores are biogeographically diverse and whilst extensive scientific research has investigated many aspects of carnivore biology not all species have been equally covered This book is unique in its intention to provide practical guidance for carrying out research and conservation of carnivores across all species and areas of the world

Large Carnivore Conservation and Management Tasos

Hovardas,2018-07-11 Large carnivores include iconic species such as bears wolves and big cats Their habitats are increasingly being shared with humans and there is a growing number of examples of human carnivore coexistence as well as conflict Next to population dynamics of large carnivores there are considerable attitude shifts towards these species worldwide with multiple implications This book argues and demonstrates why human dimensions of relationships to large carnivores are crucial for their successful conservation and management It provides an overview of theoretical and methodological perspectives heterogeneity in stakeholder perceptions and behaviour as well as developments in decision making stakeholder involvement policy and governance informed by human dimensions of large carnivore conservation and management The scope is international with detailed examples and case studies from Europe North and South America Central and South Asia as well as debates of the challenges faced by urbanization agricultural expansion national parks and protected areas The main species covered include bears wolves lynx and leopards The book provides a novel perspective for advanced students researchers and professionals in ecology and conservation wildlife management human wildlife interactions environmental education and environmental social science

People and Predators Defenders of

Wildlife,2012-06-22 Carnivores provide innumerable ecological benefits and play a unique role in preserving and maintaining ecosystem services and function but at the same time they can create serious problems for human populations A key question for conservation biologists and wildlife managers is how to manage the world s carnivore populations to conserve this important natural resource while mitigating harmful impacts on humans In *People and Predators* leading scientists and researchers offer case studies of human carnivore conflicts in a variety of landscapes including rural urban and political The book covers a diverse range of taxa geographic regions and conflict scenarios with each chapter dealing with a specific facet of human carnivore interactions and offering practical concrete approaches to resolving the conflict under consideration Chapters provide background on particular problems and describe how challenges have been met or what research or tools are still needed to resolve the conflicts *People and Predators* will helps readers to better understand issues of carnivore conservation in the 21st century and provides practical tools for resolving many of the problems that stand between us and a future in which carnivores fulfill their historic ecological roles

Large Carnivores and the Conservation of

Biodiversity Justina Ray,Kent H. Redford,Robert Steneck,Joel Berger,2013-04-09 Large Carnivores and the Conservation of

Biodiversity brings together more than thirty leading scientists and conservation practitioners to consider a key question in environmental conservation: Is the conservation of large carnivores in ecosystems that evolved with their presence equivalent to the conservation of biological diversity within those systems? Building their discussions from empirical long term data sets, contributors including James A. Estes, David S. Maehr, Tim McClanahan, Andrés J. Novaro, John Terborgh, and Rosie Woodroffe explore a variety of issues surrounding the link between predation and biodiversity. What is the evidence for or against the link? Is it stronger in marine systems? What are the implications for conservation strategies? *Large Carnivores and the Conservation of Biodiversity* is the first detailed broad scale examination of the empirical evidence regarding the role of large carnivores in biodiversity conservation in both marine and terrestrial ecosystems. It contributes to a much more precise and global understanding of when, where, and whether protecting and restoring top predators will directly contribute to the conservation of biodiversity. Everyone concerned with ecology, biodiversity, or large carnivores will find this volume a unique and thought provoking analysis and synthesis.

Forest Carnivore Conservation and Management in the Interior Columbia Basin Gary William Witmer, 1998. Forest carnivores in the Pacific Northwest include 11 medium to large sized mammalian species of canids, felids, mustelids, and ursids. These carnivores have widely differing status in the region with some harvested in regulated furbearer seasons, some taken for depredations, and some protected because of rarity. Most large carnivores have declined in numbers or range from human encroachment, loss or modification of forest habitat, accidental deaths (e.g. mortality from vehicles), illegal kills, and our inability to adequately monitor and protect populations. Efforts to reverse these trends include new approaches to reduce conflicts with humans, research to better define habitat needs, formation of expert carnivore working groups, and use of Geographic Information System models to predict specific impacts of habitat modifications. Long term preservation of large carnivores in the region is problematic unless we reduce forest fragmentation and conflicts with humans and improve our ability to quantitatively integrate population dynamics with landscape level habitat requirements. **Park Science**, 2009. **Ecological Corridors and Species** Fabio Corsi, Iacopo Sinibaldi, Luigi Boitani, 2002.

L'tablissement du Réseau écologique paneuropéen représente un des objectifs majeurs de la Stratégie paneuropéenne de la diversité biologique et paysagère. La notion de corridor écologique revêt une importance particulière dans la mise en œuvre de ce vaste réseau. Dans ce cadre, le présent rapport porte sur la mise au point d'outils de connaissance destinés à gérer le processus de gestion des populations de grands carnivores. Ce travail s'appuie sur les résultats obtenus dans le cadre du projet sur les zones de conservation des grands carnivores d'Europe. Large Carnivore Conservation Areas in Europe (LCCA) mis en œuvre par l'Istituto di Ecologia Applicata (IEA) de Rome pour le compte de l'initiative pour les grands carnivores d'Europe. Walker's Carnivores of the World Ronald M. Nowak, 2005-01-07. Although they are highly intelligent, ruthless predators, carnivores are increasingly rare. From the dwarf mongoose to the polar bear, carnivores are at once respected and

misunderstood invoking both fear and curiosity in the humans with whom they share their world Ronald M Nowak celebrates these fascinating mammals in Walker's *Carnivores of the World* This comprehensive guide featuring 225 illustrations covers the world's eight terrestrial families of carnivores Each generic account comprises scientific and common names number and distribution of species physical attributes measurements hunting and social activity reproduction habitat population dynamics longevity and status of threatened species A thought provoking overview by David W Macdonald and Roland W Kays is packed with results of the latest field and laboratory research on topics ranging from evolutionary history to the adaptive value of fur patterns Emphasizing the interplay of social life morphology and predatory behavior it provides an up to date panorama of the world's carnivores General Technical Report PNW-GTR ,1997 **Where the Wild Things Were** William Stolzenburg,2011-01-15 For years predators like snow leopards and white tipped sharks have been disappearing from the top of the food chain largely as a result of human action Science journalist Will Stolzenburg reveals why and how their absence upsets the delicate balance of the world's environment *Proceedings RMRS.* ,1998 **The Carnivore Way** Cristina Eisenberg,2014-05-20 What would it be like to live in a world with no predators roaming our landscapes Would their elimination which humans have sought with ever greater urgency in recent times bring about a pastoral peaceful human civilization Or in fact is their existence critical to our own and do we need to be doing more to assure their health and the health of the landscapes they need to thrive In *The Carnivore Way* Cristina Eisenberg argues compellingly for the necessity of top predators in large undisturbed landscapes and how a continental long corridor a carnivore way provides the room they need to roam and connected landscapes that allow them to disperse Eisenberg follows the footsteps of six large carnivores wolves grizzly bears lynx jaguars wolverines and cougars on a 7 500 mile wildlife corridor from Alaska to Mexico along the Rocky Mountains Backed by robust science she shows how their well being is a critical factor in sustaining healthy landscapes and how it is possible for humans and large carnivores to coexist peacefully and even to thrive University students in natural resource science programs resource managers conservation organizations and anyone curious about carnivore ecology and management in a changing world will find a thoughtful guide to large carnivore conservation that dispels long held myths about their ecology and contributions to healthy resilient landscapes *Urban Carnivores* , *Small Carnivores* Emmanuel Do Linh San,Jun J. Sato,Jerrold L. Belant,Michael J. Somers,2022-07-13 *Small Carnivores Evolution Ecology Behaviour and Conservation* This book focuses on the 232 species of the mammalian Order Carnivora with an average body mass 21.5 kg Small carnivores inhabit virtually all of the Earth's ecosystems adopting terrestrial semi fossorial semi arboreal or semi aquatic lifestyles They occupy multiple trophic levels and therefore play important roles in the regulation of ecosystems such as natural pest control seed dispersal and nutrient cycling In areas where humans have extirpated large carnivores small carnivores may become the dominant predators which may increase their abundance mesopredator release to the point that they can sometimes destabilize communities drive local extirpations and reduce

overall biodiversity On the other hand one third of the world's small carnivores are threatened or near threatened with extinction This results from regionally burgeoning human populations industrial and agricultural activities causing habitat reduction destruction fragmentation and pollution Overexploitation persecution and the impacts of introduced predators competitors and pathogens have also negatively affected many small carnivore species Although small carnivores have been intensively studied over the past decades bibliometric studies showed that they have not received the same attention given to large carnivores Furthermore there is huge disparity in how research efforts on small carnivores have been distributed with some species intensively studied and others superficially or not at all This book aims at filling a gap in the scientific literature by elucidating the important roles of and documenting the latest knowledge on the world's small carnivores pThis is a book that has been needed for decades It is the first compendium of recent research on a group of mammals which has received almost no attention before the early 1970s This book covers a wide range of subdisciplines and techniques and should be considered a solid baseline for further research on this little known group of highly interesting mammals As our knowledge regarding how ecosystems function increases then the valuable role of small carnivores and the necessity for their conservation should be regarded as of paramount importance The topics covered in this book should therefore be of great interest not only to academics and wildlife researchers but also to the interested layman

Reintroduction of Top-Order Predators Matt W. Hayward, Michael Somers, 2009-04-13 Large predators are among the most threatened species on the planet and ways of conserving them in the face of increasing human populations and associated resource requirements are becoming critical This book draws upon the experiences of some of the world's foremost large carnivore specialists to discuss the numerous issues associated reintroducing large predators back into their natural habitats Reviews of internationally renowned reintroduction programs for wolves European lynx and African wild dog reveal the successes and failures of these actions Experts on tigers snow leopards and jaguars contend that there are other conservation options of higher priority that will ensure their security in the long term Other experts discuss more theoretical aspects such as whether we know enough about these species to be able to predict their behavioural or ecological response to the reintroduction process Social economic political and genetic considerations are also addressed
