Democratizing Innovation:

Democratizing Innovation Eric von Hippel, 2005 Innovation is rapidly becoming democratized. Users aided by improvements in computer and communications technology increasingly can develop their own new products and services. Eric von Hippel looks closely at this emerging system of user centred innovation. **Democratizing Innovation** Eric A. von Hippel, 2012 Innovation is rapidly becoming democratized. Users aided by improvements in computer and communications technology increasingly can develop their own new products and services. These innovating users both individuals and firms often freely share their innovations with others creating user innovation communities and a rich intellectual commons. In Democratizing Innovation I look closely at this emerging user centered innovation system which is affecting both information products and physical products. Drawing on work done with several coauthors I explore why and when users find it profitable to develop new products and services for themselves and why it often pays users to reveal their innovations freely for the use of all. Drawing on work with Nikolaus Franke Pam Morrison and others I document that product and service development is concentrated among lead user firms and individuals. Lead users that are ahead on marketplace trends do not replicate manufacturer development efforts. Instead they develop products that are not yet available. Later manufacturers find many of these user developed products to be the basis for commercial products. Drawing upon work with Dietmar Harhoff Joachim Henkel and others I report that user innovation has a positive impact on social welfare and propose that government policies including R D subsidies and tax credits should be realigned to eliminate biases against it. Democratizing Innovation in Organizations Philippe Davidson, 2022-02-02 Managers often isolate their innovation teams but wouldn't it be better to engage all the workers in innovation? This book describes a framework that makes innovation a daily consideration for all. It involves allowing a knowledge network to develop naturally which complements the existing organizational structure making it more organic. It fosters more extensive collaboration amongst workers to produce more imaginative solutions that maximize value. The workers are encouraged to consult one another spontaneously across their organization and beyond its traditional boundaries. Insightful and constructive exchanges stimulate their thinking making them creative partners. Unsuspected capabilities ideas and value are revealed. Philippe Davidson describes creative deliberation techniques designed to maximize stakeholder value. The framework also makes organizations nimbler and more resilient to market changes. They become more sustainable in ever changing conditions because learning and change become the norm. Innovation champions will find powerful arguments for introducing democratized innovation in their organizations. A wealth of practical techniques and handy tips for participative work based training will help organizational trainers and facilitators to democratize innovation. Management consultants will find invaluable insights to advise their clients on innovation. Your workers are your organization's best agents of change. Unleash their natural creativity.

Mechanisms to Enable Follow-On Innovation Alina

Wernick,2021-05-13 The patent system is based on one patent per product presumption and therefore fails to sustain complex follow on innovations that contain a number of patents The book explains that follow on innovations may be subject to market failures such as hold ups and excessive royalties For decades scholars have debated whether the market problems can be solved with voluntary licensing i e open innovation or with compulsory liability rules The book concludes that neither approach is sufficient On the one hand incentives to engage in open innovation practices involving patents are insufficient On the other hand the existing compulsory liability rules in patent and competition law are not tailored to address follow on innovator s interests To transcend this problem the author proposes a compulsory liability rule against the suppression of follow on innovation that paradoxically fosters early on voluntary licensing between patent holders and follow on innovators The book is aimed at patent and competition law scholars and practitioners patent attorneys managers engineers and economists who either engage in open innovation involving patents or conduct research on the topic It also offers insights to policy and law makers reviewing the possibilities to foster open innovation initiatives or adapt the scope of patent remedies or employ compulsory licenses for patents The Oxford Handbook of Intellectual Property Law Rochelle C.

Dreyfuss,Justine Pila,2018-04-12 We live in an age in which expressive informational and technological subject matter are becoming increasingly important Intellectual property is the primary means by which the law seeks to regulate such subject matter It aims to promote innovation and creativity and in doing so to support solutions to global environmental and health problems as well as freedom of expression and democracy It also seeks to stimulate economic growth and competition accounting for its centrality to EU Internal Market and international trade and development policies Additionally it is of enormous and increasing importance to business As a result there is a substantial and ever growing interest in intellectual property law across all spheres of industry and social policy including an interest in its legal principles its social and normative foundations and its place and operation in the political economy This handbook written by leading academics and practitioners from the field of intellectual property law and suitable for both a specialist legal readership and an intelligent but non specialist legal and non legal readership provides a comprehensive account of the following areas The foundations of IP law including its emergence and development in different jurisdictions and regions The substantive rules and principles of IP and Important issues arising from the existence and operation of IP in the political economy

contributors **Free Innovation** Eric Von Hippel,2016-11-10 A leading innovation scholar explains the growing phenomenon and impact of free innovation in which innovations developed by consumers and given away for free In this book

Eric von Hippel author of the influential Democratizing Innovation integrates new theory and research findings into the framework of a free innovation paradigm Free innovation as he defines it involves innovations developed by consumers who are self rewarded for their efforts and who give their designs away for free It is an inherently simple grassroots innovation process unencumbered by compensated transactions and intellectual property rights Free innovation is already widespread in national economies and is steadily increasing in both scale and scope Today tens of millions of consumers are collectively spending tens of billions of dollars annually on innovation development However because free innovations are developed during consumers unpaid discretionary time and are given away rather than sold their collective impact and value have until very recently been hidden from view This has caused researchers governments and firms to focus too much on the Schumpeterian idea of innovation as a producer dominated activity Free innovation has both advantages and drawbacks Because free innovators are self rewarded by such factors as personal utility learning and fun they often pioneer new areas before producers see commercial potential At the same time because they give away their innovations free innovators generally have very little incentive to invest in diffusing what they create which reduces the social value of their efforts The best solution von Hippel and his colleagues argue is a division of labor between free innovators and producers enabling each to do what they do best The result will be both increased producer profits and increased social welfare a gain for all
