Children's Reasoning and the Mind Peter Mitchell, Kevin Riggs, 2014-06-03 This fresh and dynamic book offers a thorough investigation into the development of the cognitive processes that underpin judgements about mental states often termed theory of mind and addresses specific issues that have not been adequately dealt with in the past and which are now being raised by some of the most prominent researchers in the field

Making Minds Professor Henry M. Wellman, 2014-10-09 Developmental psychologists coined the term theory of mind to describe how we understand our shifting mental states in daily life. Over the past twenty years researchers have provided rich provocative data showing that from an early age children develop a sophisticated and consistent theory of mind by attributing their desires, beliefs and emotions to themselves and to others. Remarkably, infants barely a few months old are able to attend closely to other humans; two year olds can articulate the desires and feelings of others and comfort those in distress; and three and four year olds can talk about thoughts abstractly and engage in lies and trickery. This book provides a deeper examination of how theory of mind develops. Building on his pioneering research in *The Child's Theory of Mind* 1990, Henry M. Wellman reports on all that we have learned in the past twenty years with chapters on evolution and the brain bases of theory of mind and updated explanations of theory theory and later theoretical developments including how children conceive of extraordinary minds such as those belonging to superheroes or supernatural beings. Engaging and accessibly written, Wellman's work will appeal especially to scholars and students working in psychology, philosophy, cultural studies and social cognition.

The Child's Theory of Mind Henry M. Wellman, 1990 Do children have a theory of mind? If they do, at what age is it acquired? What is the content of the theory and how does it differ from that of adults? *The Child's Theory of Mind* integrates the diverse strands of this rapidly expanding field of study. It charts children's knowledge about a fundamental topic—the mind—and characterizes that developing knowledge as a coherent commonsense theory strongly advancing the understanding of everyday theories as well as the commonsense theory of mind. Wellman presents evidence that children as young as age three do possess a commonsense theory of mind that they grasp the distinction between mental constructs and physical entities and that they have an understanding of the relationship between individuals' mental states and their overt actions. He delves in detail into questions about the nature of adults' commonsense theories of mind and about the nature of commonsense theories. Wellman then examines the content of the three year old's theory of mind, the nature of children's notions of mind before age three, the changes in the theory during subsequent development from ages three to six, and the young child's conception of mind in comparison with those of older children and adults. Henry M. Wellman is a Professor in the Department of Psychology and the Center for Human Growth and Development at the University of Michigan at Ann

Arbor **The Reasoning Brain: The Interplay between Cognitive Neuroscience and Theories of Reasoning** Vinod Goel, Gorka Navarrete, Ira A. Noveck, Jérôme Prado, 2017-04-03 Despite the centrality of rationality to our identity as a species let alone the scientific endeavour and the fact that it has been studied for several millennia the present state of our knowledge of the mechanisms underlying logical reasoning remains highly fragmented. For example a recent review concluded that none of the extant 12 theories provide an adequate account. Khemlani, Oaksford, Over, 2009. Over the past 15 years neuroscience, brain imaging techniques and patient studies have been used to map out the functional neuroanatomy of reasoning processes. The aim of this research topic is to discuss whether this line of research has facilitated, hindered or has been largely irrelevant for understanding of reasoning processes. The answer is neither obvious nor uncontroversial. We would like to engage both the cognitive and the neuroscience community in this discussion. Some of the questions of interest are: How have the data generated by the patient and neuroimaging studies influenced our thinking about modularity of deductive reasoning? Impacted the debate between mental logic theory, mental model theory and the dual mechanism accounts. Affected our thinking about dual mechanism theories informed discussion of the relationship between induction and deduction. Illuminated the relationship between language, visual, spatial processing and reasoning. Affected our thinking about the unity of deductive reasoning processes. Have any of the cognitive theories of reasoning helped us explain deficits in certain patient populations? Do certain theories do a better job of this than others? Is there any value to localizing cognitive processes and identifying dissociations for reasoning and other cognitive processes? What challenges have neuroimaging data raised for cognitive theories of reasoning? How can cognitive theory inform interpretation of patient data or neuroimaging data? How can patient data or neuroimaging data best inform cognitive theory? This list of questions is not exhaustive. Manuscripts addressing other related questions are welcome. We are interested in hearing from skeptics, agnostics and believers and welcome original research contributions as well as reviews, methods, hypothesis, discussion. 85-120 doi:10.1017/S0140525X09000284 Over, D. How and when does a child begin to make sense of the world? Why does a lively preschool child so often become a semiliterate and defeated school failure? Neural Correlates of Children's Theory of Mind Development David Liu, 2005 **British Journal of Children's Diseases**, 1905 **Children's Understanding and Production of Pictures, Drawings & Art** Constance Milbrath, 2008. This book presents an innovative approach to the psychological study of children's pictures, drawings and art. With contributions from leading experts in the field, it compiles all the relevant theory and research on children's developing conceptions of pictures, drawings and art. It is the first book to focus explicitly on children's knowledge and judgment of pictorial representations, including the understanding of their role as artist and viewer. **The Educational Times, and Journal of the College of Preceptors**, 1893 **Children Talk About the Mind** Karen Bartsch, Henry M. Wellman, 1995-01-26. What exactly do children

understand about the mind And when does that understanding first emerge In this groundbreaking book Karen Bartsch and Henry Wellman answer these questions and much more by taking a probing look at what children themselves have to tell us about their evolving conceptions of people and their mental lives By examining more than 200 000 everyday conversations sampled from ten children between the ages of two and five years the authors advance a comprehensive naive theory of mind that incorporates both early desire and belief desire theories to trace childhood development through its several stages Throughout the book offers a splendidly written account of extensive original findings and critical new insights that will be eagerly read by students and researchers in developmental psychology cognitive psychology philosophy and psycholinguistics
