The De Gruyter Handbook of Automated Futures Vaike Fors, Martin Berg, Meike Brodersen, 2024-09-23 How does automation affect us our environment and our imaginations What

actions should we take in response to automation Beyond grand narratives and technology driven visions of the future what more can automation offer With these questions in mind The De Gruyter Handbook of Automated Futures provides a framework for thinking about and implementing automation differently It consolidates automated futures as an inter and transdisciplinary research field embedding the imaginaries interactions and impacts of automation technology within their social historical societal cultural and political contexts Promoting a critical yet constructive and engaging agenda the handbook invites readers to collaborate with rather than resist automation agendas It does so by pushing the agenda for social science humanities and design beyond merely assessing and evaluating existing technologies Instead the handbook demonstrates how the humanities and social sciences are essential to the design and governance of sustainable sociotechnical systems Methodologically the handbook is underpinned by a pedagogical approach to staging co learning and co creation of automated futures with rather than simply for people In this way the handbook encourages readers to explore new and alternative modes of research fostering a deeper engagement with the evolving landscape of automation

Life in Media Mark Deuze, 2023-07-25 A new way to teach media studies that centers students lived experiences and diverse perspectives from around the world From the intimate to the mundane most aspects of our lives how we learn love work and play take place in media Taking an expansive global perspective this introductory textbook covers what it means to live in rather than with media Mark Deuze focuses on the lived experience how people who use smartphones the internet and television sets make sense of their digital environment to investigate the broader role of media in society and everyday life Life in Media uses relatable examples and case studies from around the world to illustrate the foundational theories concepts and methods of media studies The book is structured around six core themes how media inform and inspire our daily activities how we live our lives in the public eye how we make distinctions between real and fake how we seek and express love how we use media to effect change how we create media and shared narratives and how we seek to create well being within media By deliberately including diverse voices and radically embracing the everyday and mundane aspects of media life this book innovates ways to teach and talk about media Highlights diverse international voices images and cases Uses accessible examples from everyday life to contextualize theory Offers a comprehensive student centered introduction to media studies Extensively annotated bibliography offers dynamic sources for further study including readings and documentary films

Towards HRI of Everyday Life Karolina Zawieska, Mohammad Obaid , Wafa Johal, Jessica Sorenson, Catharina Vesterager Smedegaard, Glenda Hannibal, 2025-10-03 Presently it is often assumed that at least in principle robots and social robots in particular have the potential to increase human well being across a wide range of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social

robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions to further develop the HRI domain
