

## Using the busses

This section describes briefly how to use the input and output busses you have created. For details refer to the chapters "Recording" on page 68 and "The mixer" on page 109.

### Routing

When you play back an audio track (or any other audio-related channel in the mixer – VST instrument channels, ReWire channels, etc.), you route it to an output bus. In the same way, when you record on an audio track you select from which input bus the audio should be sent.

- You can select input and output busses in the Inspector, using the Input and Output Routing pop-up menus.

- You can also select busses in the Routing panel at the top of each channel strip in the mixer.

- If the Routing panel is not shown, click the Show Routing button in the extended common panel or open the Mixer context menu and select "Show Routing View" from the Window submenu (see "Normal vs. Extended channel strips" on page 112).
- For audio-related channel types other than audio track channels (i.e. VST instrument channels, ReWire channels, Group channels and FX channels), only the Output Routing pop-up menu is available.

- If you press [Shift]-[Alt]/[Option] and select an input or output bus in the Track list or the Mixer Routing View (Cubase only), it will be chosen for all selected channels. This makes it easy to quickly set several channels to use the same input or output. Similarly, if you press [Shift] and select a bus, the following selected channels will be set to use incrementing busses – the second selected channel will use the second bus, the third will use the third bus, and so on.

When selecting an input bus for a track you can only select busses that correspond to the track's channel configuration. Here are the details for input busses:

- Mono tracks can be routed to mono input busses or individual channels within a stereo or surround input bus (Cubase only).
- Mono tracks can be routed to External Inputs configured on the Studio tab of the VST Connections window. These can be mono or individual channels within a stereo or surround bus (Cubase only). They can also be routed to the Talkback input.
- Mono tracks can also be routed to mono output busses, mono group output busses or mono FX channel output busses, provided that these will not lead to feedback.
- Stereo tracks can be routed to mono input busses, stereo input busses or stereo child busses within a surround bus (Cubase only).
- Stereo tracks can be routed to External Inputs that are configured in the Studio tab of the VST Connections window. These can be mono input busses or stereo input busses. They can also be routed to the Talkback input.
- Stereo tracks can also be routed to mono or stereo output busses, mono or stereo group output busses and mono or stereo FX channel output busses, provided that these will not lead to feedback.
- Surround tracks can be routed to surround input busses (Cubase only).
- Surround tracks can be routed to External Inputs that are configured in the Studio tab of the VST Connections window, provided that these have the same input configuration.
- Surround tracks can also be routed to output busses, provided that these have the same input configuration or will not lead to feedback.

For output busses any assignment is possible.

**⚠** Assignments that will lead to feedback are not available in the pop-up menu. This is also indicated by a one-way symbol.

To disconnect input or output bus assignments, select "No Bus" from the corresponding pop-up menu.
