relevant insights and diagnostic tools to develop precision medicine approaches tailored to individual patients and specific bacterial infections To gather further insights into the molecular mechanisms driving bacterial pathogenesis and host immune responses we welcome articles addressing but not limited to the following themes Exploration of underlying mechanisms of bacterial pathogenesis and host immune response by integrating multi omics data genomics transcriptomics proteomics metabolomics microbiotics Development of computational algorithms and tools for identifying bacterial virulence factors and their interactions with host proteins using machine learning approaches Development of predictive frameworks for forecasting infection severity disease progression and treatment responses Identification of host factors and pathways contributing to immune response using omics approaches Identification of biomarkers by integrating omics and machine learning approaches
