**The Airline Profit Cycle** Eva-Maria Cronrath, 2017-07-06

The air transport industry has high economic impact it supports more than 60 million jobs worldwide. Since the early years of commercial air travel passenger numbers have grown tremendously. However for decades airlines financial results have been swinging between profits and losses. The airline industry's aggregate net average profit between 1970 and 2010 was close to zero which implies bankruptcies and layoffs in downturns. The profit cycle's amplitude has been rising over time which means that problems have become increasingly severe and also shows that the industry may not have learned from the past. More stable financial results could not only facilitate airline management decisions and improve investors confidence but also preserve employment. This book offers a thorough understanding of the airline profit cycle's causes and drivers and it presents measures to achieve a higher and more stable profitability level. This is the first in depth examination of the airline profit cycle. The airline industry is modelled as a complex dynamic system which is used for quantitative simulations of what if scenarios. These experiments reveal that the general economic environment such as GDP or fuel price developments influence the airline industry's profitability pattern as well as certain regulations or aircraft manufacturers policies. Yet despite all circumstances simulations show that airlines own management decisions are sufficient to generate higher and more stable profits in the industry. This book is useful for aviation industry decision makers investors policy makers and researchers because it explains why the airline industry earns or loses money. This knowledge will advance forecasting and market intelligence. Furthermore the book offers practitioners different suggestions to sustainably improve the airline industry's profitability. The book is also recommended as a case study for system analysis as well as industry cyclicalities at graduate or postgraduate level for courses such as engineering economics or management
